Calibration in a Virtual Environment using Simulink Design Optimization

Sangmin Park, Hyundai motors Group

Contents

- Introduction of the Team/Task
- Definition of Virtual Calibration
- Model Parameter Optimization
- Use Case
- Conclusion

Profile

20years Chassis Engineer in HMC R&D Center

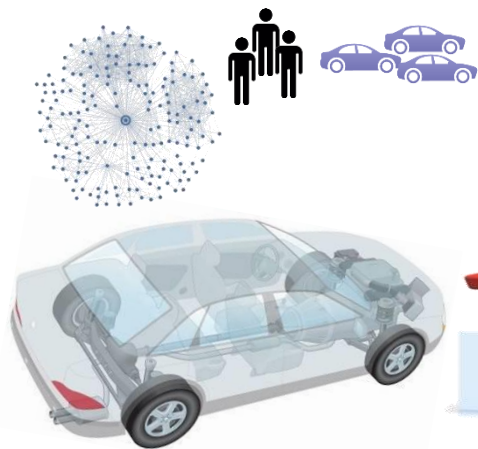

- Platform Development Team (2005~
 - Suspension & Steering Design
- Vehicle Performance Development Team
 - Advanced Vehicle R&H Development
- High Performance Development Team
 - i30 N MDPS & ESC Test
- Dynamics Functional Concept (~)
 - Brake Control Simulation & Driving simulator

Automotive Industry trend: Increasing complexity

 Vehicle Complexity =
 Number of parameters +  Engineers +  Prototype Vehicles

Today

Past

Virtual Vehicle

Virtual vehicle refers to the virtualization of the vehicle product development lifecycles, typically using a system-level simulation of the vehicle behavior.

Virtual Vehicle

Virtual vehicle refers to the virtualization of the vehicle product development lifecycles, typically using a system-level simulation of the vehicle behavior.

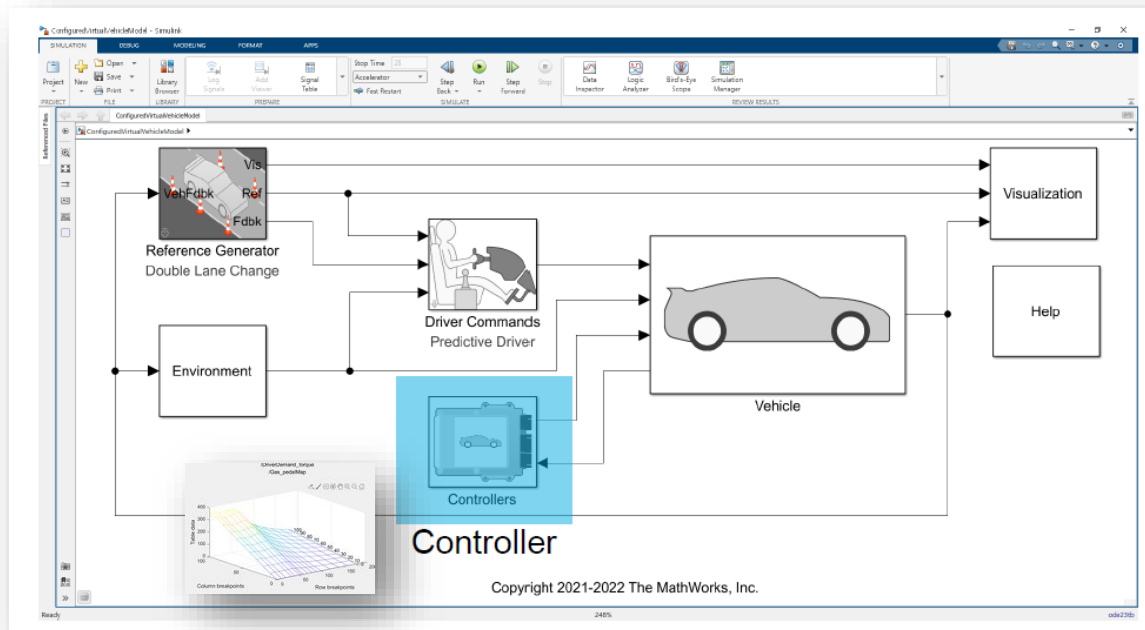

In order to develop a virtual vehicle, you must

- Create vehicle model
- Integrate embedded software
- Define test scenarios
- **Simulate and analyze**

Concept of Virtual Calibration

- Process of optimizing control system parameters in a Virtual Environment
- Deriving performance without physical tests
- Time and Cost efficiency, repeatable test

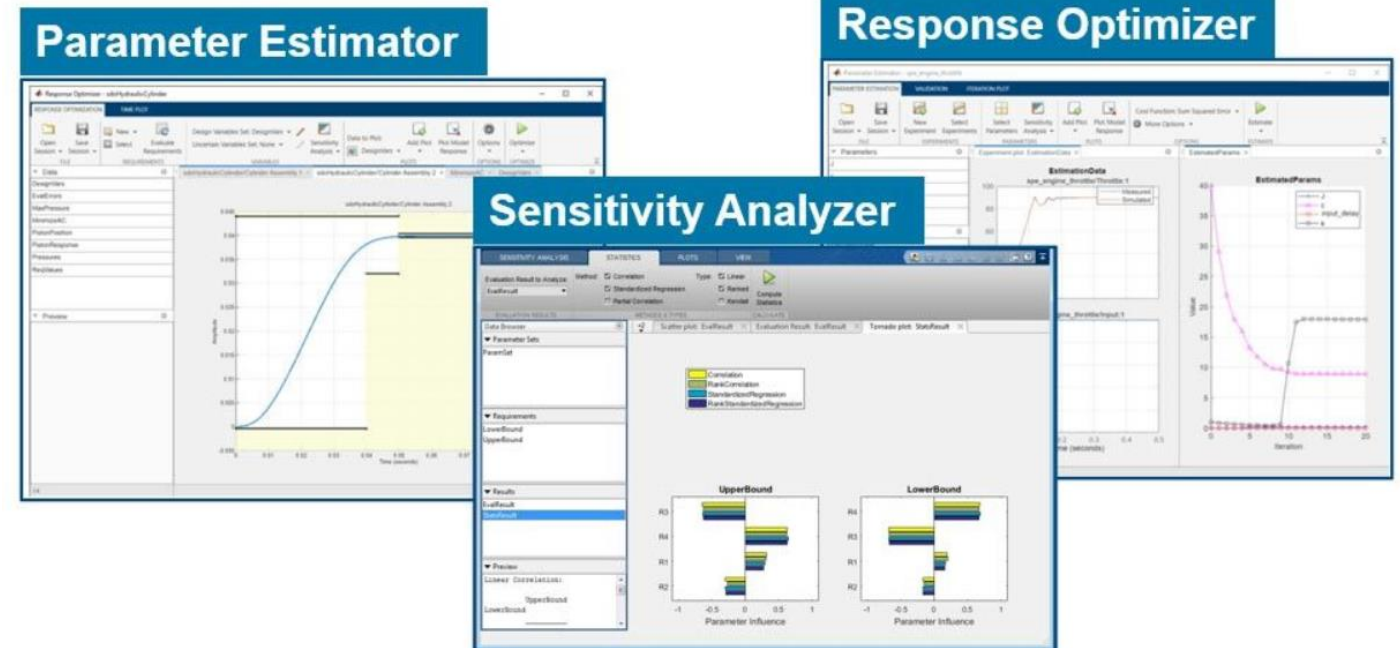

Model Parameter Calibration in Simulink

Simulink Design Optimization

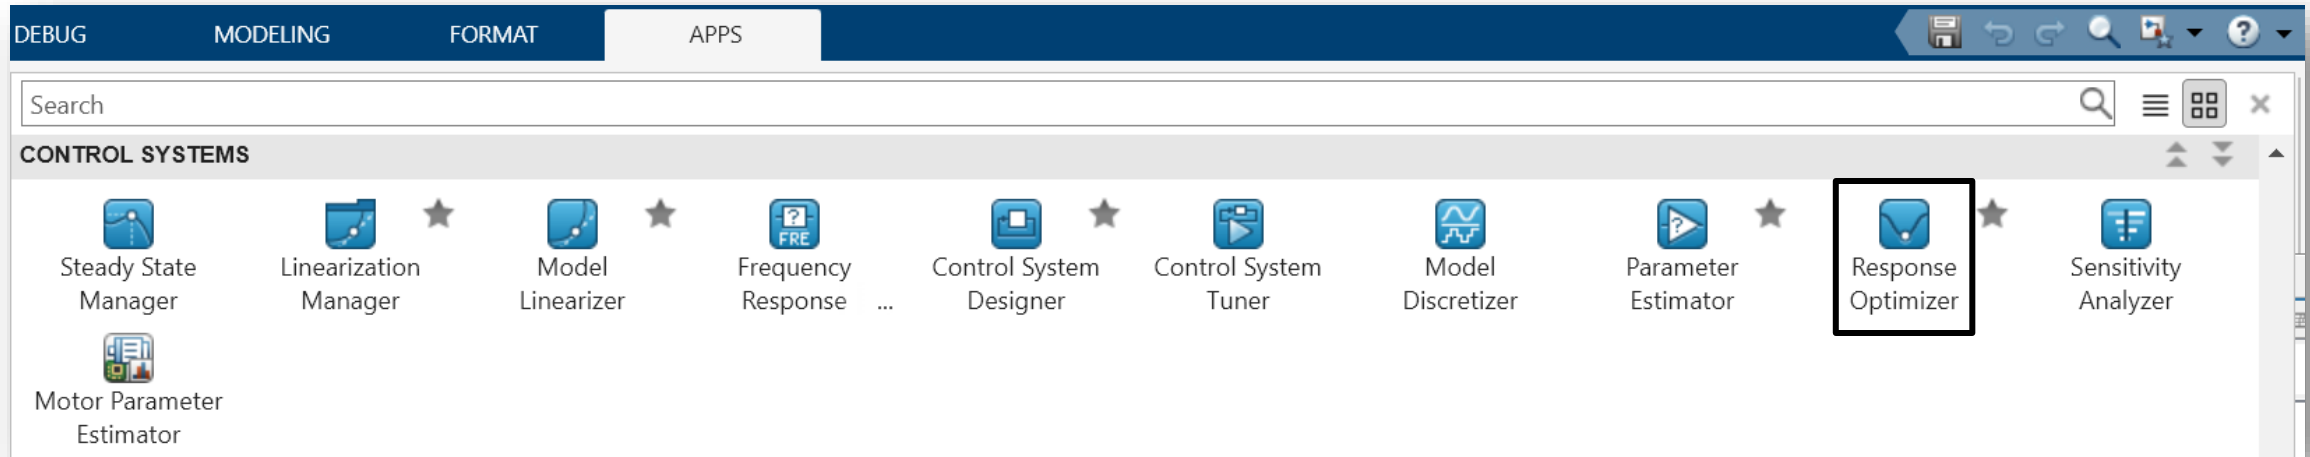

Analyze model sensitivity and tune model parameters

Simulink Design Optimization provides functions, interactive tools and blocks for analyzing and tuning model parameters.

- Design Optimization Apps
- Parameter Estimation
- Response Optimization
- Sensitivity Analysis
- Optimization Solvers

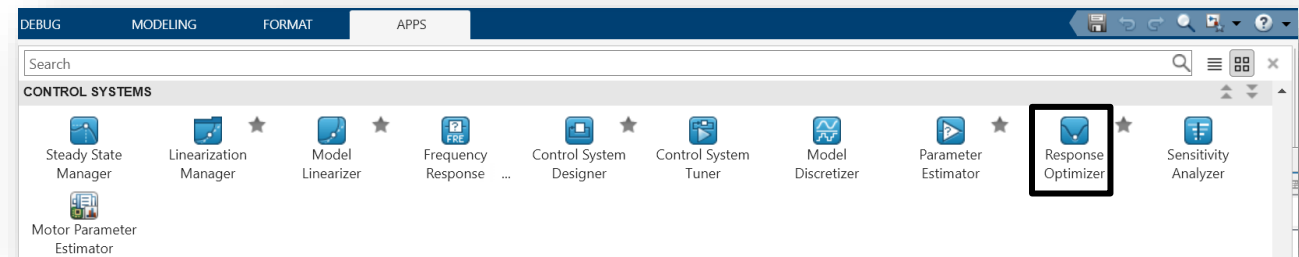

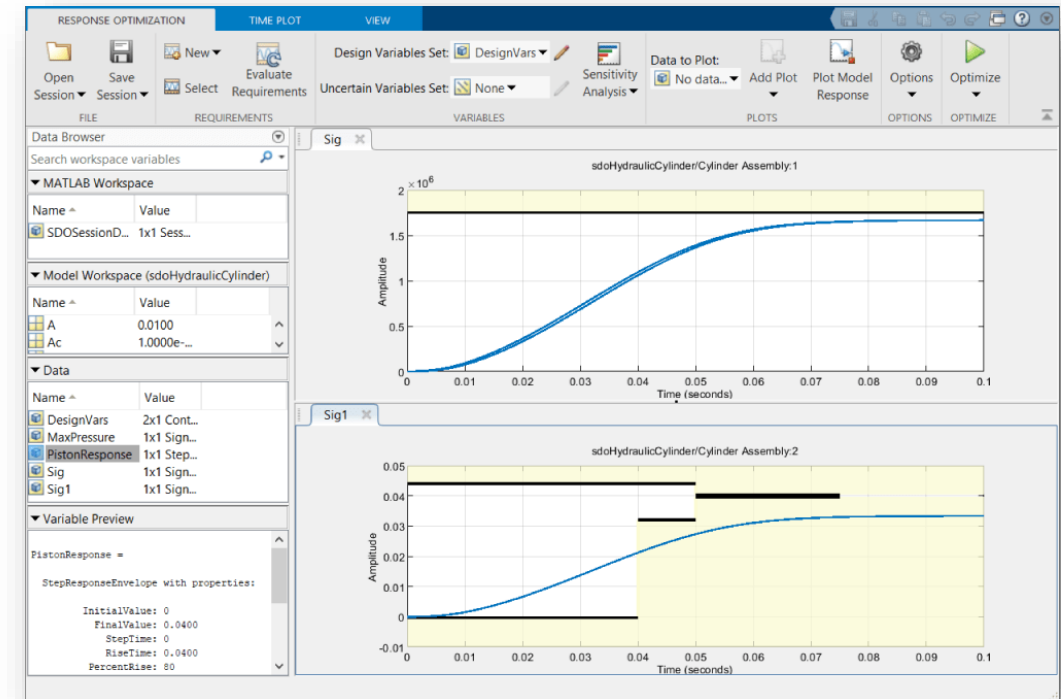

Overview of Response Optimizer

Overview of Response Optimizer

- A tool for optimizing based on Simulink models
- Setting performance goals and Constraints
- Parameter Optimization and Real-time feedback
- Application in PID controllers, ESC, ABS

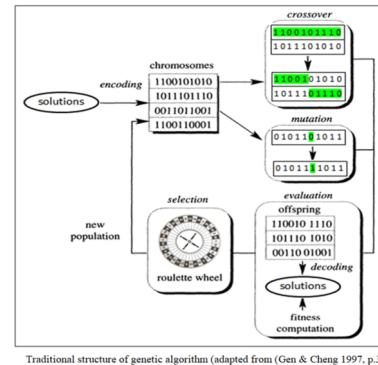

Optimization Algorithms

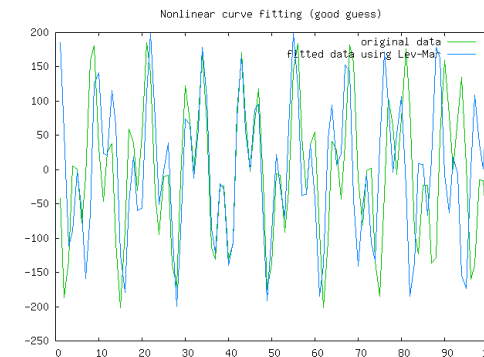

- Gradient Descent

- Genetic Algorithm

- Levenberg-Marquardt Algorithm

- Simulated Annealing

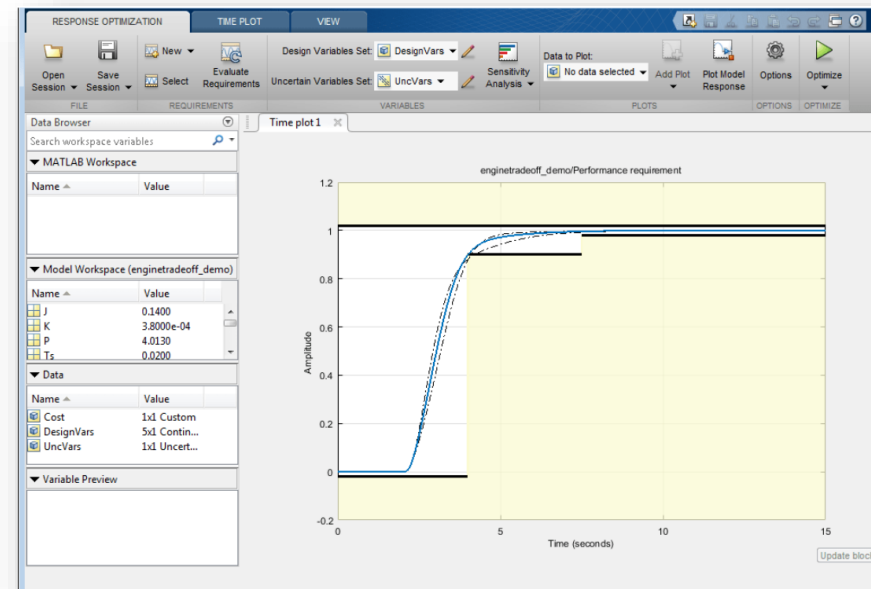

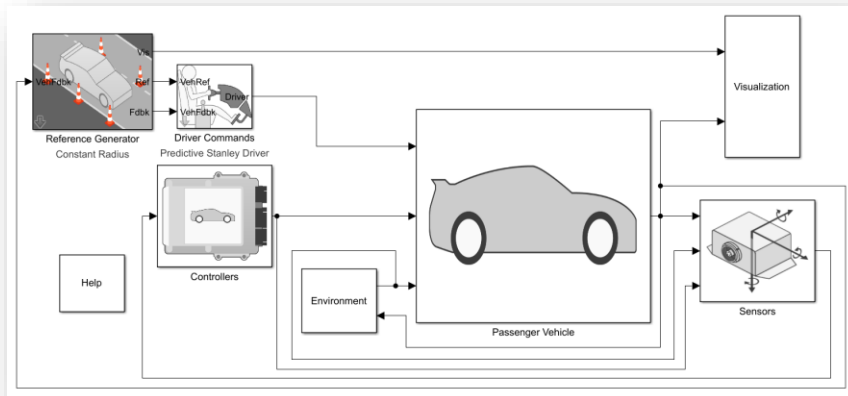

- Pattern Search

 Ⓑ Simulated Annealing : <https://www.sciencedirect.com/topics/social-sciences/simulated-annealing>
 Ⓒ Genetic Algorithm : <https://learnwithpanda.com/2020/09/20/what-is-genetic-algorithm>
 Ⓓ Pattern Search : [https://en.wikipedia.org/wiki/Pattern_search_\(optimization\)](https://en.wikipedia.org/wiki/Pattern_search_(optimization))
 Ⓔ Levenberg-Marquardt Algorithm : https://en.wikipedia.org/wiki/Levenberg%E2%80%93Marquardt_algorithm

Optimization Process

- Build Simulink Model
- Set performance goals and constraints
- Select parameter optimization and run optimization
- Review and validate results

MIL - Simulation Environment Setup

- Build Vehicle Dynamics and Integrated Control Models in Carmaker4Simulink
- Implement ABS,ESC and xECU controllers

Optimization in Various Driving Conditions

- Optimize for different road conditions (Dry,Wet,icy)
- High /low-speed driving ,sudden Acceleration/Braking
- Cornering ,uphill/downhill driving

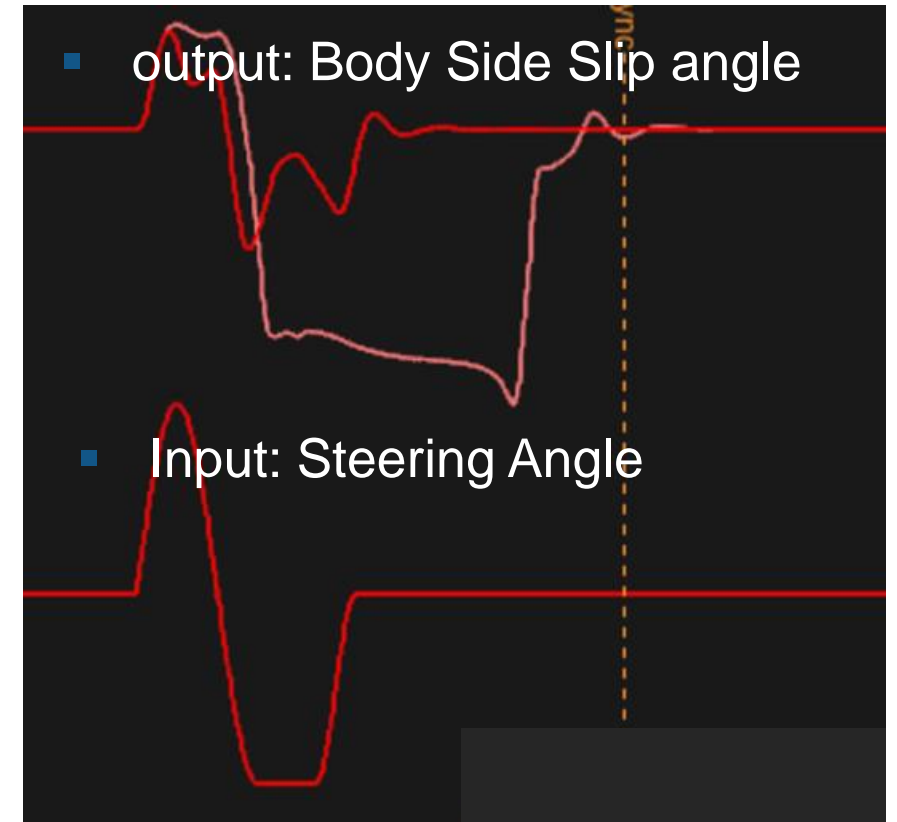

Chassis Controls System (ESC) -General

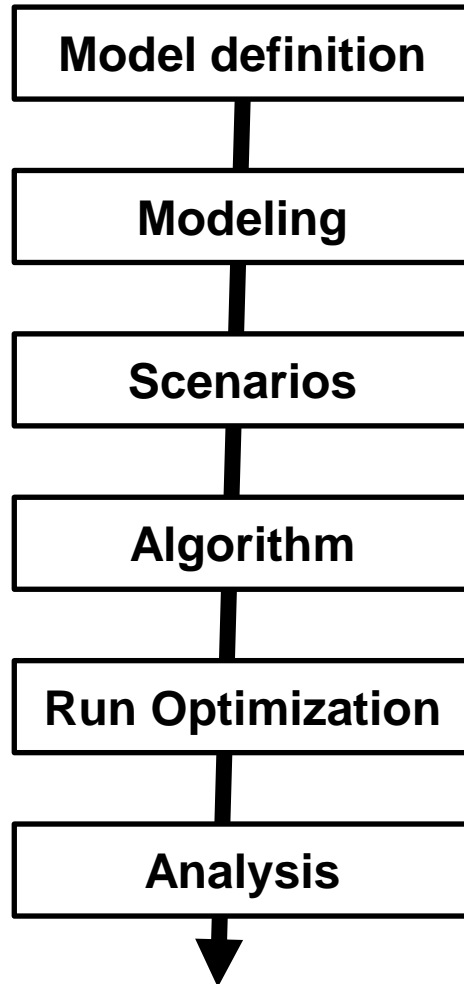

Use Case #1. ESC On/Off

- SinewithDwell Simulation

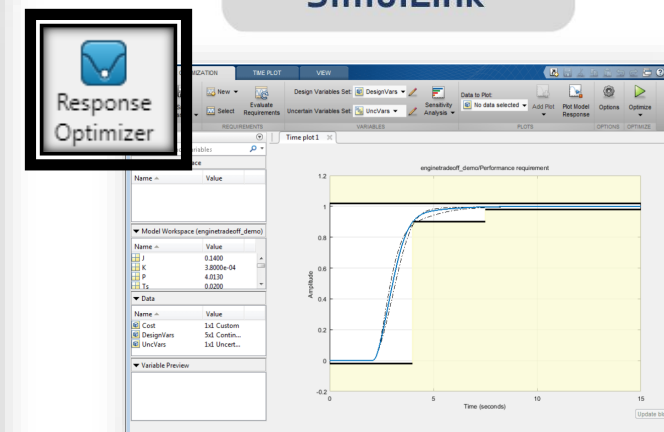

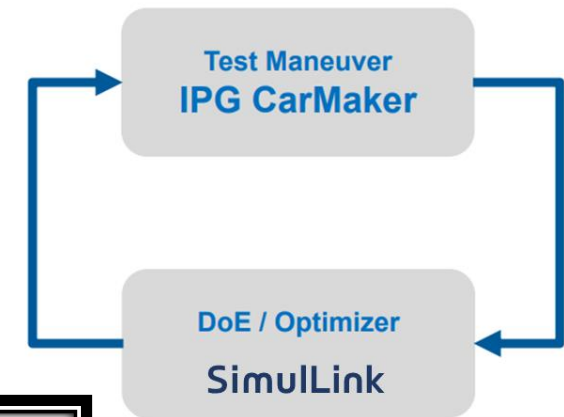

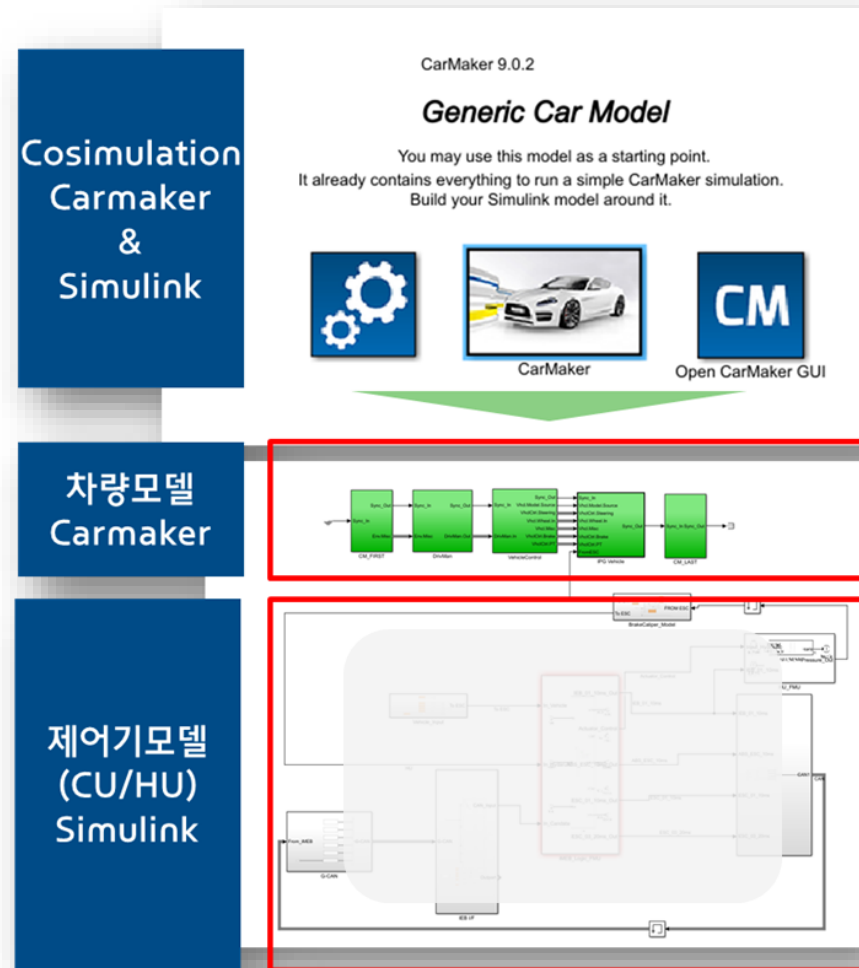

Simulation Environment and Work-Flow

- Optimization Work-flow

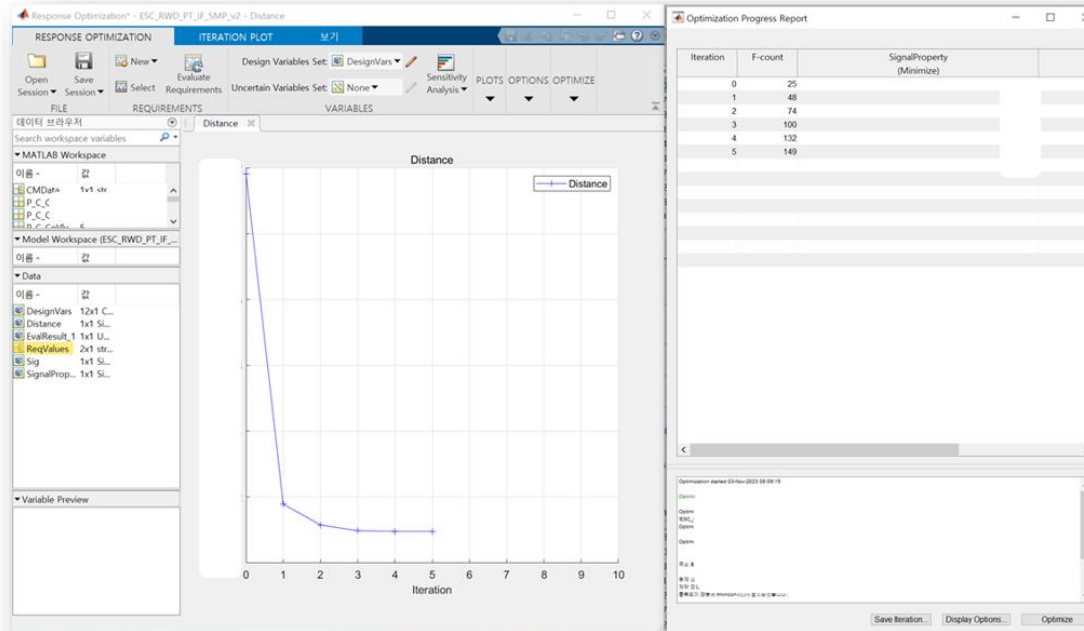

- Co-simulation (IPG CarMaker & Simulink)

Optimization Calibration of ABS Braking

Work-Flow

- Requirements
 - Minimal Braking Distance
 - Yaw Rate *.0 deg/s ↓
- Result : 2.5%reduced (1.084 ↓)
- Solving Time : 26min

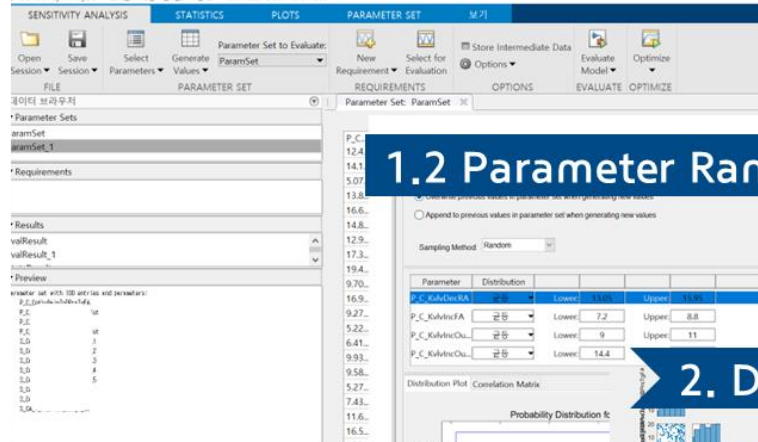

Study Sensitivity Analysis of Parameters

- Work-Flow

1.1 Parameter set

Design
Parameter
Confidential

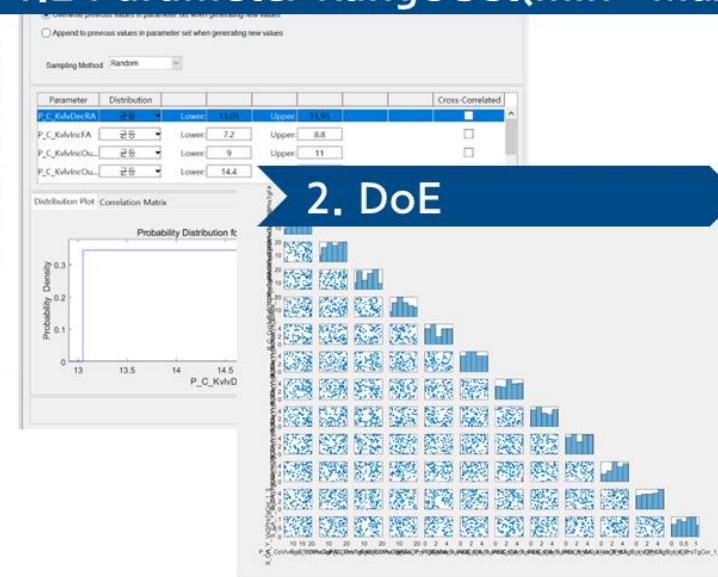

1.2 Parameter Range set(min ~Max)

Sensitivity Analysis

Big impact

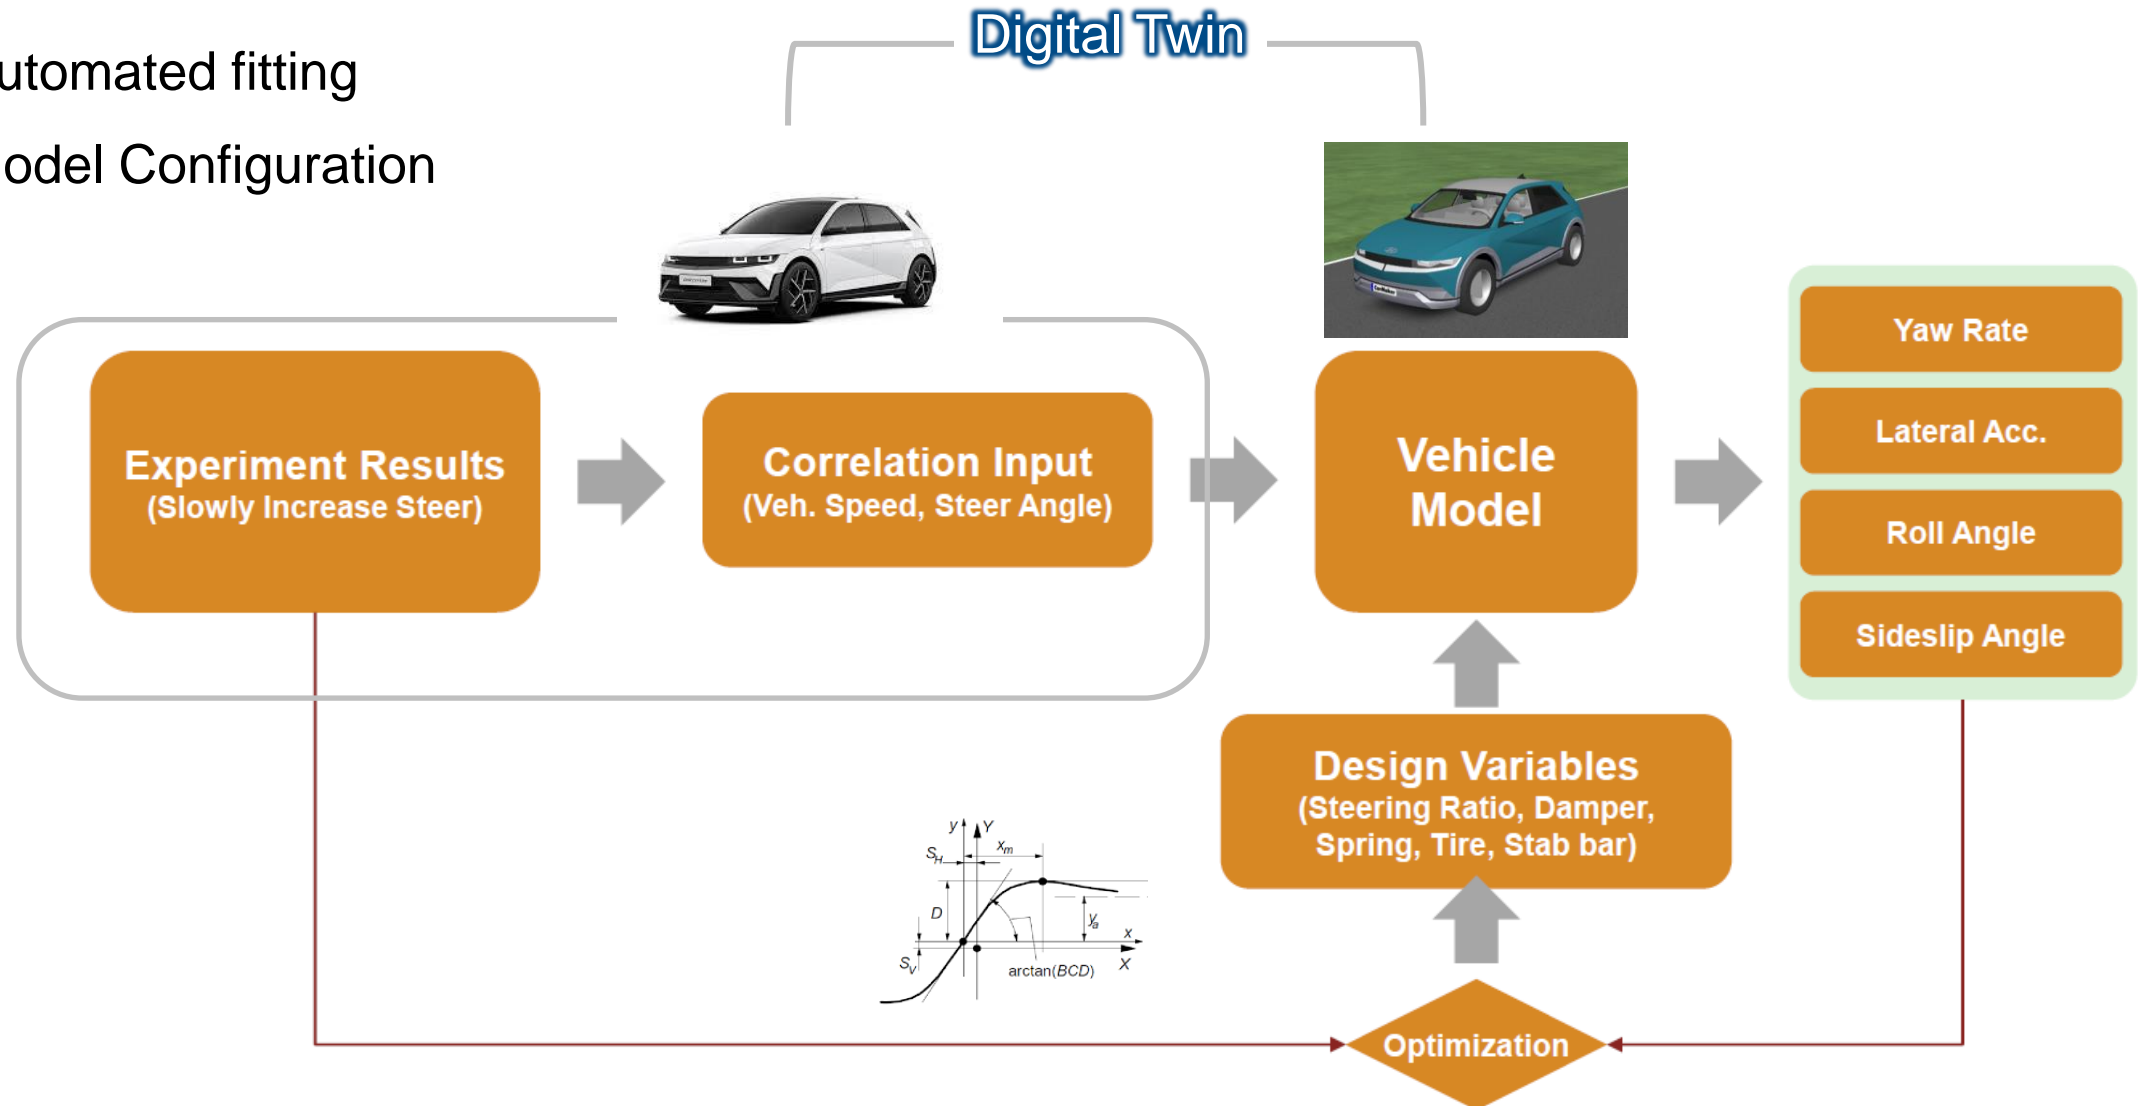

2. DoE

Generated Random 100 different sets

Use Case #2 Vehicle Model Correlation using Simulink Design Optimization

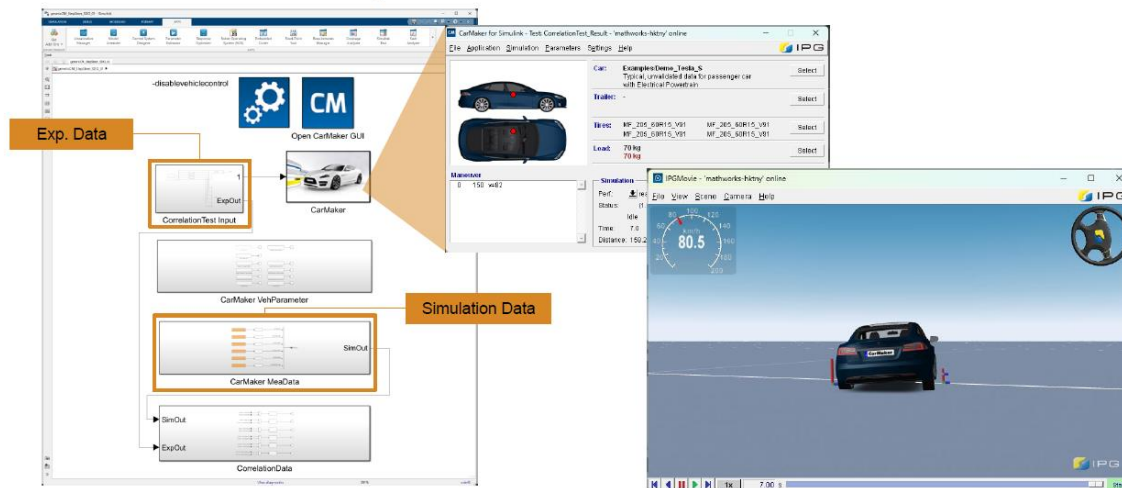

- Automated fitting
- Model Configuration

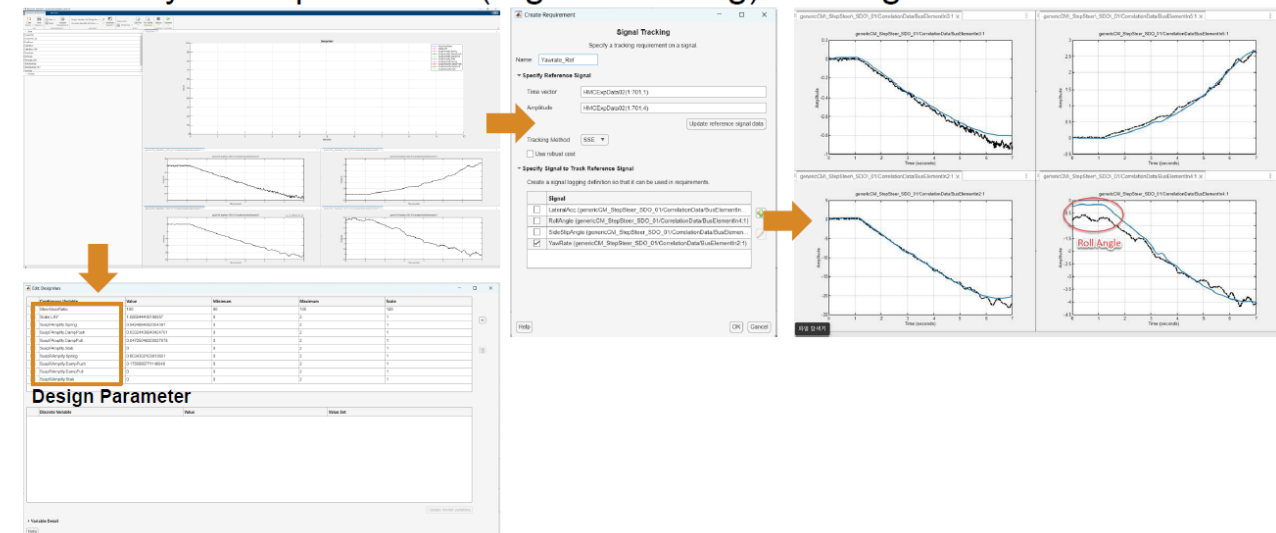

Use Case #2 Vehicle Model Correlation using Simulink Design Optimization

- Simulink Model Configuration
- IPG CarMaker Configuration – Reference
 - Model Correlation Test Run – SIS (Slowly Increase Steer) with Constant Speed (80kph)
 - Vehicle Parameter Configuration
- Response Optimizer App in Simulink Design Optimization

Simulink Model Configuration

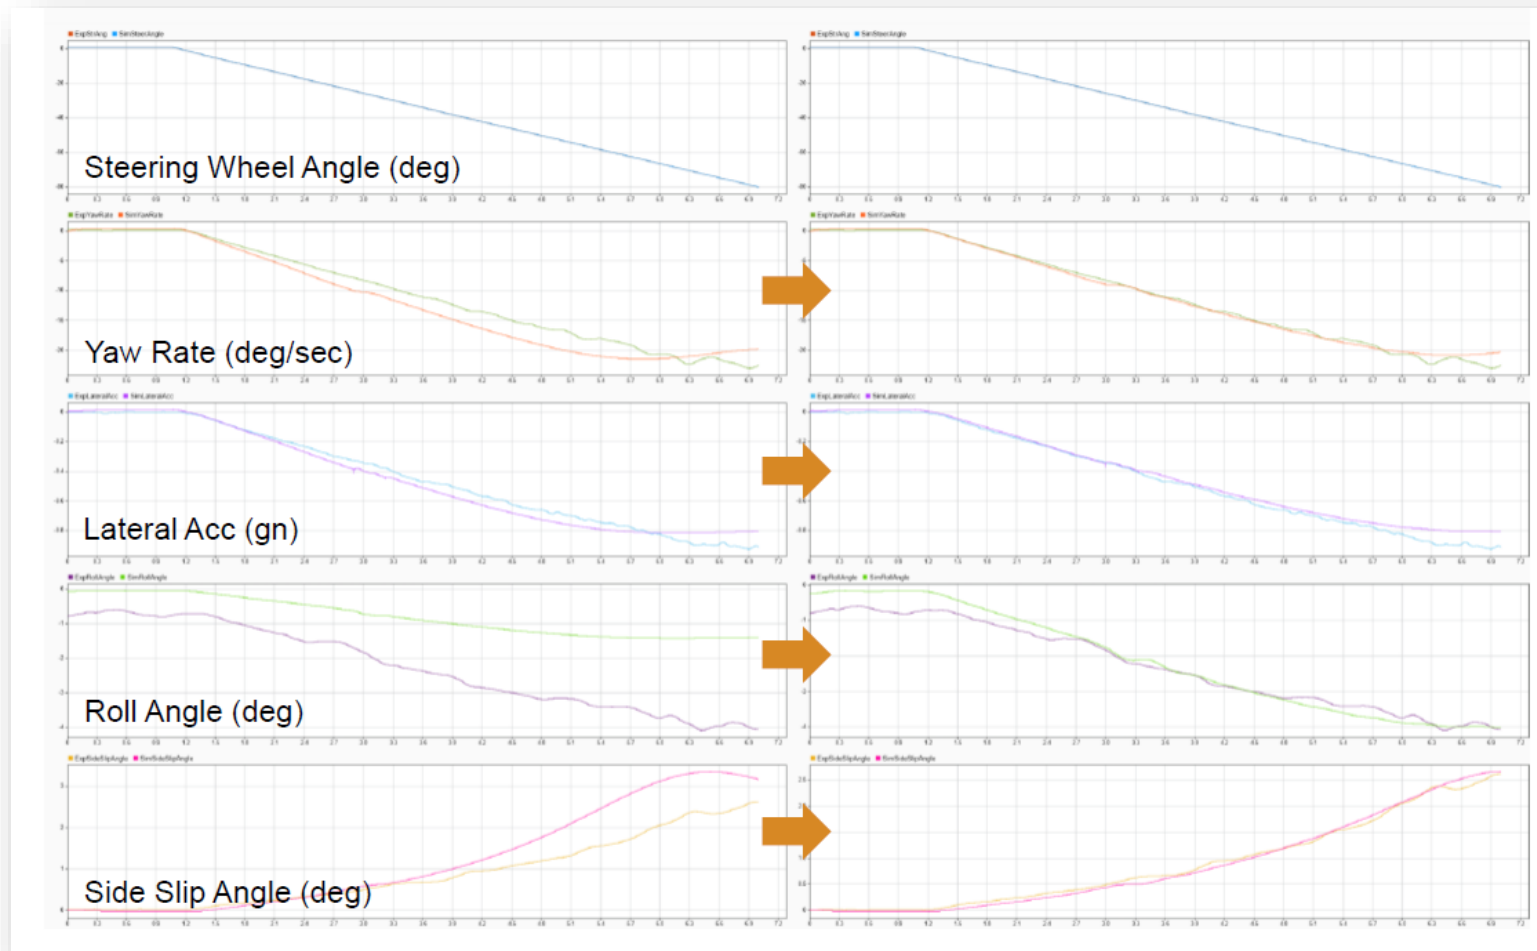

Summary of Requirements (Signal Tracking) & Design Variables

Use Case #2 Vehicle Model Correlation using Simulink Design Optimization

- Optimized Results (247 iterations using fmincon)

Conclusion

- Efficient Optimization through Virtual Calibration
- Time and cost savings, reduced risks in real-world testing
- Applicability in autonomous driving, electric vehicle control Systems

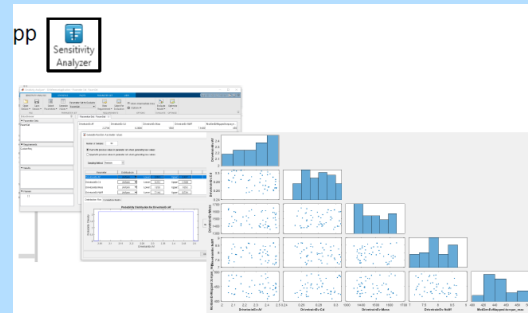

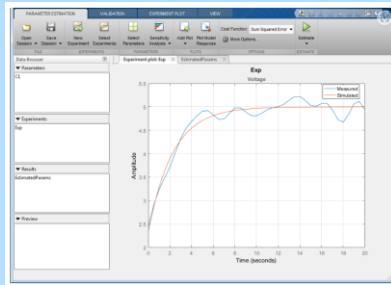

Plan

- Requirements Toolbox & Simulink Test & Report Generation

Phase1. Parameter Optimization Methodology

Model automation fitting

Parameter study

Parameter Optimization

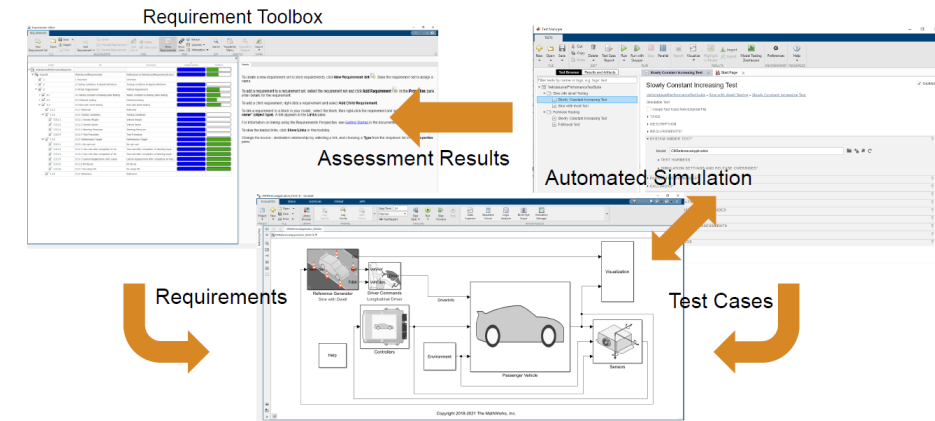

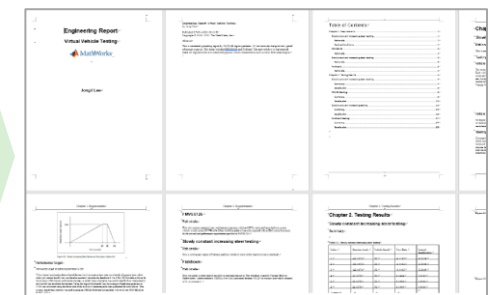

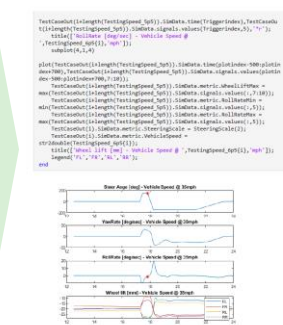

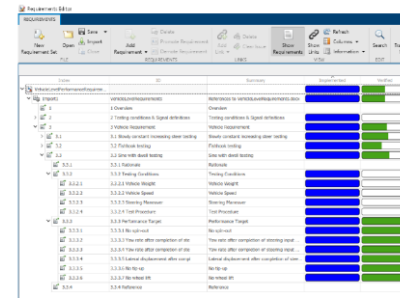

Phase2. Plan (Requirement box & Report Generating)

Requirements

Post Process

Engineering Report
