개발에서 구현까지
MATLAB 환경에서의 딥러닝

김종남
Application Engineer
Deep Learning Demo
Image Classification
Why MATLAB for Deep Learning?

- MATLAB is Productive
- MATLAB is Fast
- MATLAB Integrates with Open Source
What is Deep Learning?
Deep Learning

Model learns to perform classification tasks directly from data.
Data Types for Deep Learning

Signal  Text  Image
Deep Learning is **Versatile**

Detection of cars and road in autonomous driving systems

Rain Detection and Removal

Iris Recognition – 99.4% accuracy
How is deep learning performing so well?
Deep Learning Uses a Neural Network Architecture

Input Layer

Hidden Layers (n)

Output Layer
Thinking about Layers

- Layers are like blocks
  - Stack on top of each other
  - Replace one block with a different one

- Each hidden layer processes the information from the previous layer
Thinking about Layers

- Layers are like blocks
  - Stack them on top of each other
  - Replace one block with a different one
- Each hidden layer processes the information from the previous layer
- Layers can be ordered in different ways
Deep Learning in 6 Lines of MATLAB Code

1. Read an image to classify
Why MATLAB for Deep Learning?

- MATLAB is Productive
- MATLAB is Fast
- MATLAB integrates with Open Source
“I love to label and preprocess my data”

~ Said no engineer, ever.
Caterpillar Case Study

- World’s leading manufacturer of construction and mining equipment.

- Similarity between these projects?
  - Autonomous haul trucks
  - Pedestrian detection
  - Equipment classification
  - Terrain mapping
Computer Must Learn from Lots of Data

- ALL data must first be labeled to create these autonomous systems.

“We were spending way too much time ground-truthing [the data]”
--Larry Mianzo, Caterpillar
How Did Caterpillar Do with Our Tools?

- Semi-automated labeling process

- Used MATLAB for entire development workflow.
  - “Because everything is in MATLAB, development time is short”
How Does MATLAB Come into Play?
To label an ROI, you must first define one or more of the following label types:
- Rectangle label
- Pixel label

To label a scene, you must first define a scene label.
MATLAB is Productive

- Image Labeler App semi-automates labeling workflow
- Bootstrapping
  - Improve automatic labeling by updating algorithm as you label more images correctly.
- Easy to load metadata even when labeling manually
MATLAB is Fast

Performance

Training

Deployment
What is Training?

*Feed labeled data into neural network to create working model*
Speech Recognition Example

Audio signal → Spectrogram → Image Classification algorithm
Another Network for Signals - LSTM

- LSTM = Long Short Term Memory (Networks)
  - Signal, text, time-series data
  - Use previous data to predict new information
- I live in France. I speak ____________.
1. Create Datastore

- Datastore creates reference for data
- Do not have to load in all objects into memory

```matlab
datafolder = fullfile(tempdir,'speech_commands_v0.01');
addpath(fullfile(matlabroot,'toolbox','audio','audiodemos'))
ads = audioexample.Datastore(datafolder, ...'
'IncludeSubfolders',true, ...
'FileExtensions','.wav', ...
'LabelSource','foldernames', ...
'ReadMethod','File')
```
2. Compute Speech Spectrograms

Amplitude

Frequency

Time
3. Split datastores

Training

- 70%
- Trains the model
- Computer “learns” from this data

Validation

- 15%
- Checks accuracy of model during training

Test

- 15%
- Tests model accuracy
- Not used until validation accuracy is good
4. Define Architecture and Parameters

Neural Network Architecture

Model Parameters
5. Train Network
Deep Learning on CPU, GPU, Multi-GPU and Clusters

**HOW TO TARGET?**

```matlab
opts = trainingOptions('sgdm', ...
    'MaxEpochs', 100, ...
    'MiniBatchSize', 250, ...
    'InitialLearnRate', 0.00005, ...
    'ExecutionEnvironment', 'auto');
```

```matlab
opts = trainingOptions('sgdm', ...
    'MaxEpochs', 100, ...
    'MiniBatchSize', 250, ...
    'InitialLearnRate', 0.00005, ...
    'ExecutionEnvironment', 'multi-gpu');
```

```matlab
opts = trainingOptions('sgdm', ...
    'MaxEpochs', 100, ...
    'MiniBatchSize', 250, ...
    'InitialLearnRate', 0.00005, ...
    'ExecutionEnvironment', 'parallel');
```
Training is an Iterative Process

```matlab
miniBatchSize = 128;
validationFrequency = floor(numel(YTrain)/miniBatchSize);
options = trainingOptions('adam', ...  
    'InitialLearnRate',5e-4, ...,  
    'MaxEpochs',25, ...,  
    'MiniBatchSize',miniBatchSize, ...  
    'Shuffle','every-epoch', ...,  
    'Plots','training-progress', ...,  
    'Verbose',false, ...,  
    'ValidationData',{XValidation,YValidation}, ...,  
    'ValidationFrequency',validationFrequency, ...,  
    'ValidationPatience',Inf, ...,  
    'LearnRateSchedule','piecewise', ...,  
    'LearnRateDropFactor',0.1, ...,  
    'LearnRateDropPeriod',20);
```

Parameters adjusted according to performance
MATLAB is Fast for Deployment

- Target a GPU for optimal performance
- NVIDIA GPUs use CUDA code
- We only have MATLAB code. Can we translate this?
GPU Coder

- Automatically generates **CUDA** Code from MATLAB Code
  - can be used on NVIDIA GPUs

- CUDA extends C/C++ code with constructs for parallel computing
GPU Coder Performance

Inference with MATLAB
Why MATLAB?

- MATLAB is Productive
- MATLAB is Fast
- MATLAB Integrates with Open Source
MATLAB Integrates with Open Source Frameworks

- Access to many pretrained models through add-ons
- Users wanted to import latest models

- Import models directly from Tensorflow or Caffe
  - Allows for improved collaboration
Keras-Tensorflow Importer
MATLAB Integrates with Open Source Frameworks

- MATLAB supports entire deep learning workflow
  - Use when it is convenient for your workflow
- Access to latest models
- Improved collaboration with other users
Why MATLAB for Deep Learning?

- MATLAB is Productive
- MATLAB is Fast \((Performance)\)
- MATLAB Integrates with Open Source \((Frameworks)\)
