

MATLAB EXPO

Pragmatic Digital Transformation Through the Systematic Use of Data and Models

Jim Tung
MathWorks Fellow

Consider the doorbell

Access to the cloud

Add a camera

Add a motion sensor

Is this still a doorbell?

Digital transformation has changed the doorbell

Digital technology

- HD video
- Motion detection
- Smartphone interface
- AWS Cloud

Digital transformation has changed the doorbell

Digital technology

- HD video
- Motion detection
- Smartphone interface
- AWS Cloud

Business value

- Amazon buys Ring for \$1.2 billion+ in 2018

Amazon Acquires Ring, Maker of Video Doorbells

Front-door monitoring device plays to buyer's ambitions in home-security business

Digital transformation has changed the doorbell

Digital technology

- HD video
- Motion detection
- Smartphone interface
- AWS Cloud

Business value

- Amazon buys Ring for \$1.2 billion+ in 2018

New revenue opportunities

- “Ring Protect” subscription plans (\$99-\$499)
- Additional security with Ring Alarm kit
- More secure delivery through Amazon Key

People

Data engineers
 Algorithm designers
 App developers
 IT integrators
 Cloud experts
 Software engineers
 System architects
 Logistics experts

Processes

Logistics
 Business partnerships
 Data security
 Enterprise systems
 Model development
 Data analytics

Technologies

Controls design
 Smartphone interfaces
 Wireless systems
 Image processing
 Computer vision
 IoT platform

More than just doorbells ...

Industrial Automation

Individually customized
manufactured units

Automotive

Fully autonomous
driving capabilities

Utilities & Energy

Increased energy efficiency
with predictive maintenance

Medical

Wearable devices to
monitor mental health

Aerospace

Global management
of aircraft fleet

Finance

Real-time data analytics
for predictive insights

Why Digital Transformation?

Do things better Optimization

- Optimize design performance in-operation
- Predict when system needs maintenance
- Manage a fleet of connected systems

Do new things Transformation

Why Digital Transformation?

Do things better Optimization

- Optimize design performance in-operation
- Predict when system needs maintenance
- Manage a fleet of connected systems

Do new things Transformation

- Go into new industries and markets
- Expand into an entire platform service
- Provide unique value to your customer

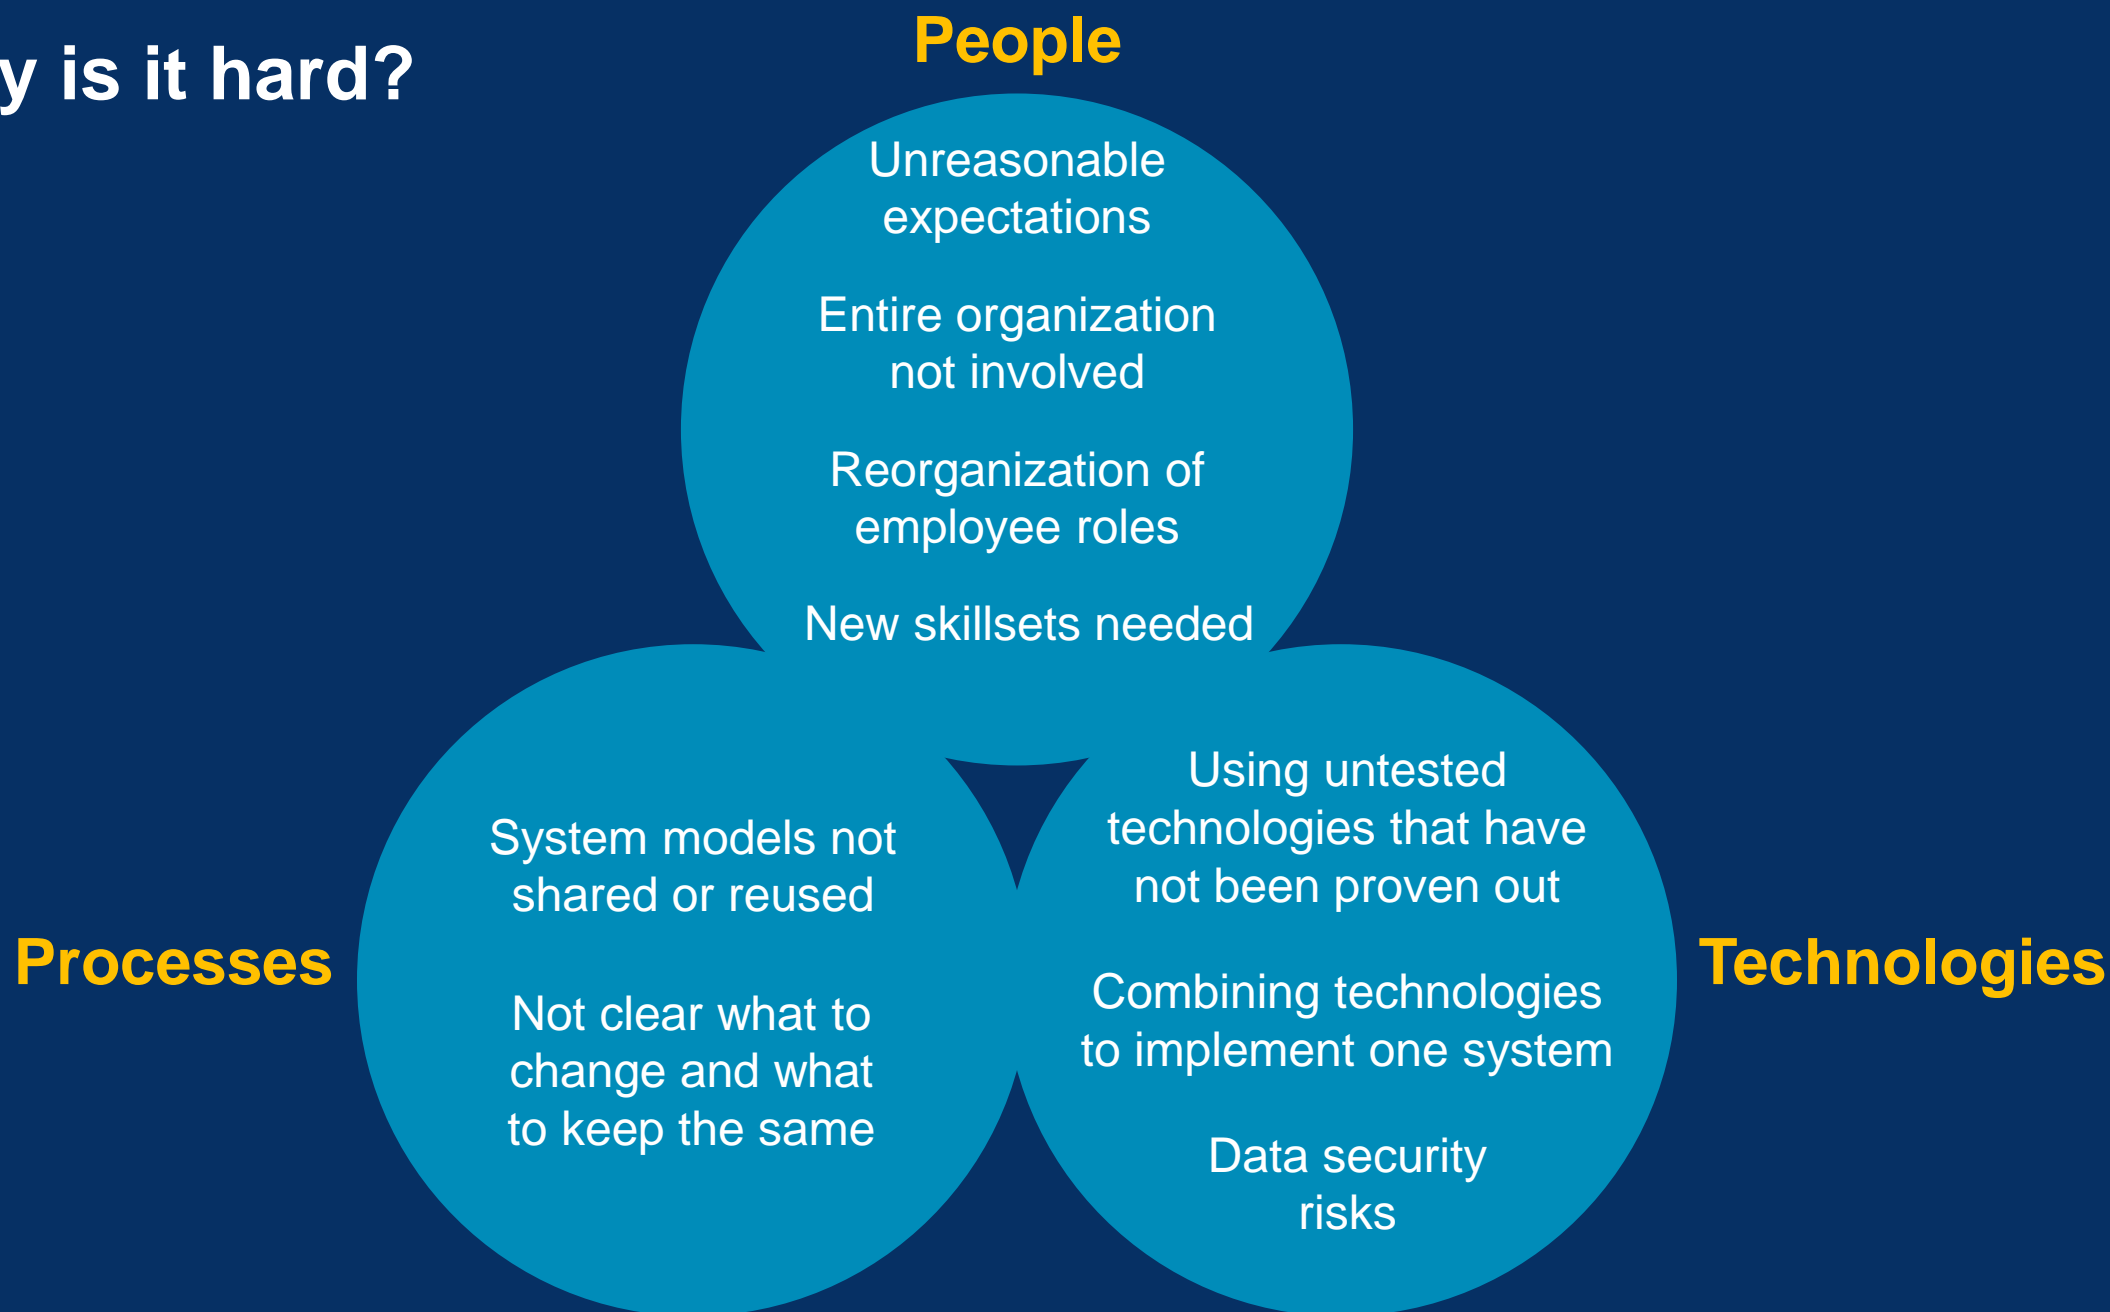

The doorbell illustrates both types

**< 20% of organizations are on target
with their digital transformation objectives**

Source: McKinsey, *Can IT Rise to the Digital Challenge?*, October 2018.

Why is it hard?

What approaches have people tried?

Big Bang Approach

Build complete infrastructure first
Value not delivered to customer

Risky

Pragmatic Approach

Build on models you already have
Extend beyond siloed use of data

Unleash untapped value

Siloed Approach

Each group works in own silo
Stuck in business model

Obsolete

Pragmatic Digital Transformation

Systematic use of data and models
to **create** and **deliver** superior value to customers
throughout the entire lifecycle

Systematic Use of Data

Data centralization has made engineering even more difficult

Field data

System data

User data

Environment data

Data diversity complexity

- Engineering, Scientific, and Field
- Business & transactional
- Noisy, Outliers, Missing data
- Time series synchronizing

Modern data management multiplies complexity

- Proliferation of data systems
- More siloes
- Cloud, on-premise, hybrid
- Big Data

Big Data

CLouDERA

Cloud Platforms

Example: GSK Consumer Healthcare

Using big batch process data to make better products

£1 billion brand

~8% growth

Close to capacity at all 20+ factories

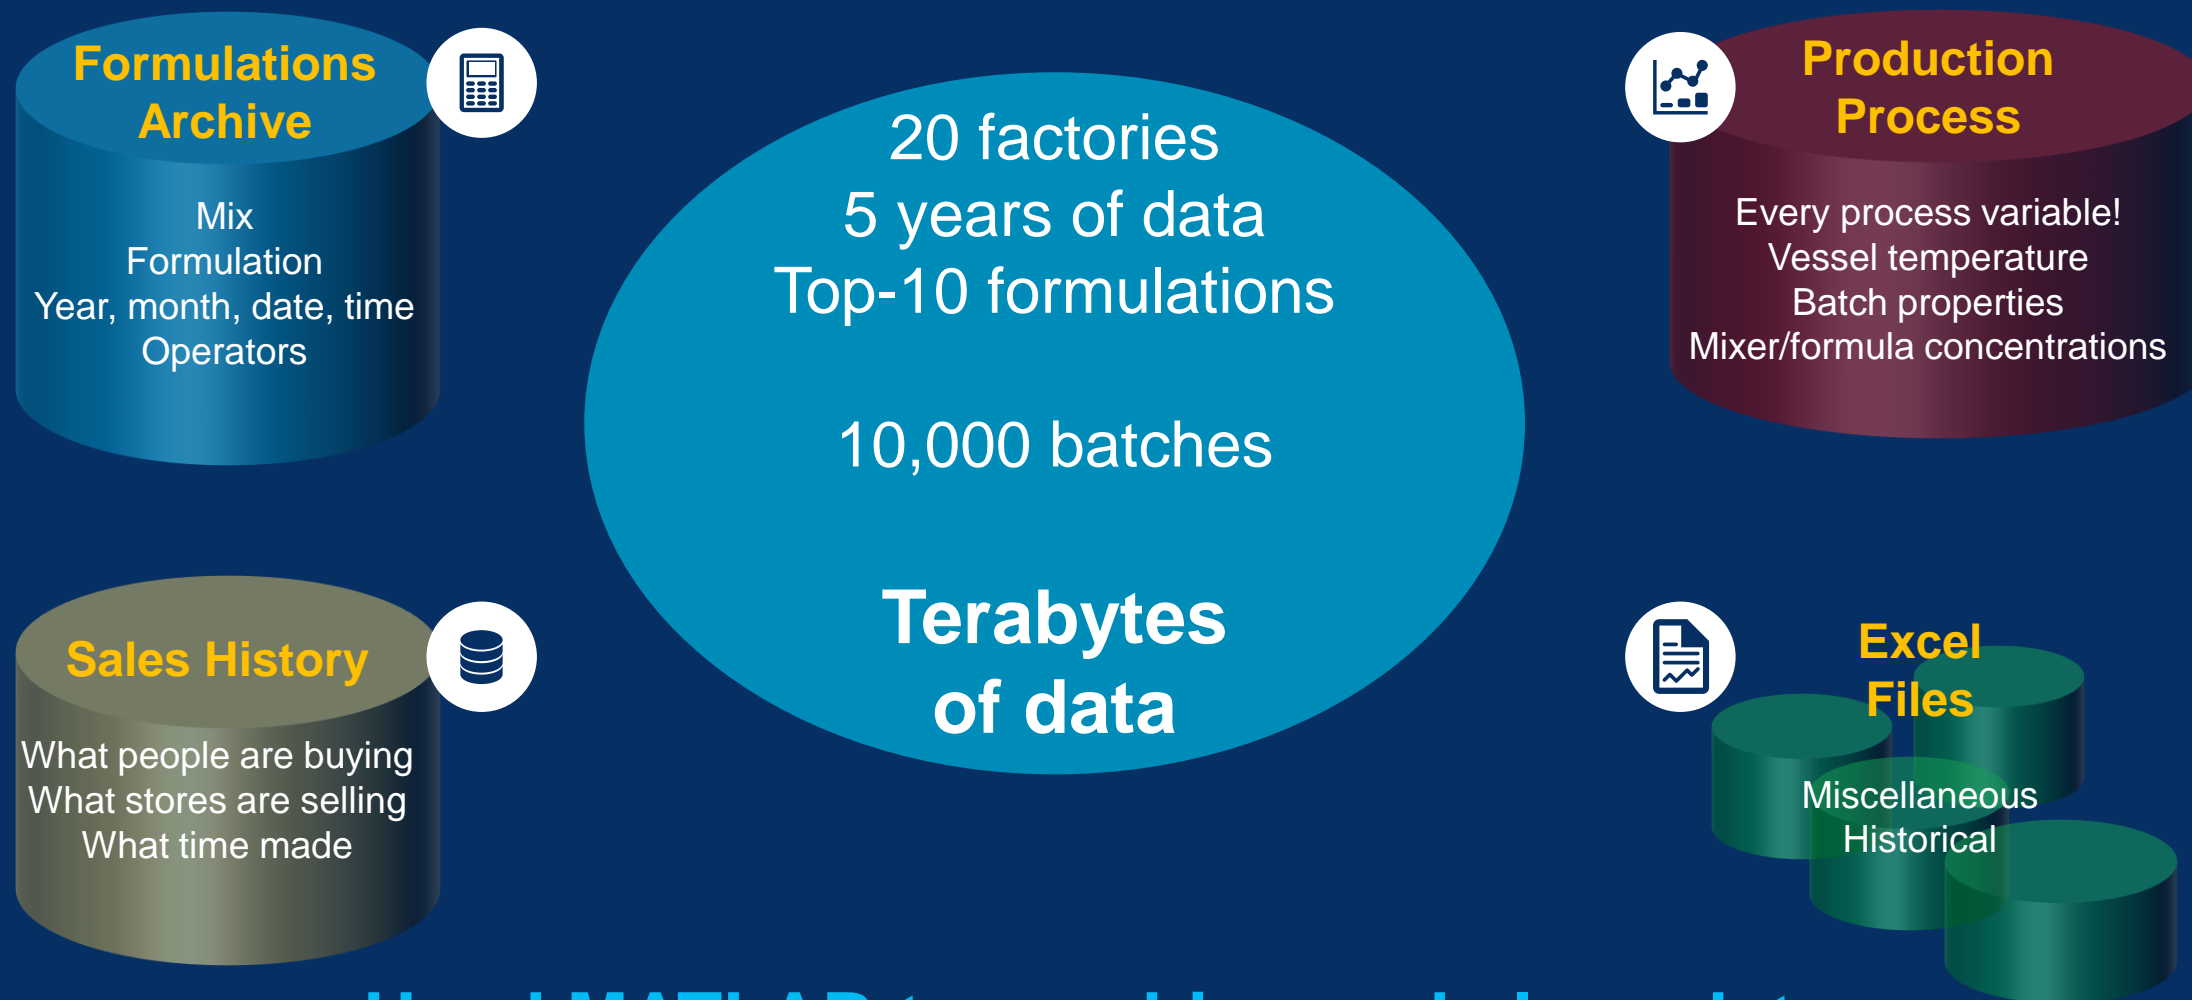

“Trying to squeeze every last drop of efficiency ...

Last thing we want to do is build another toothpaste factory”

Dr. Bob Sochon

Challenge #1: Big data lives in many siloes

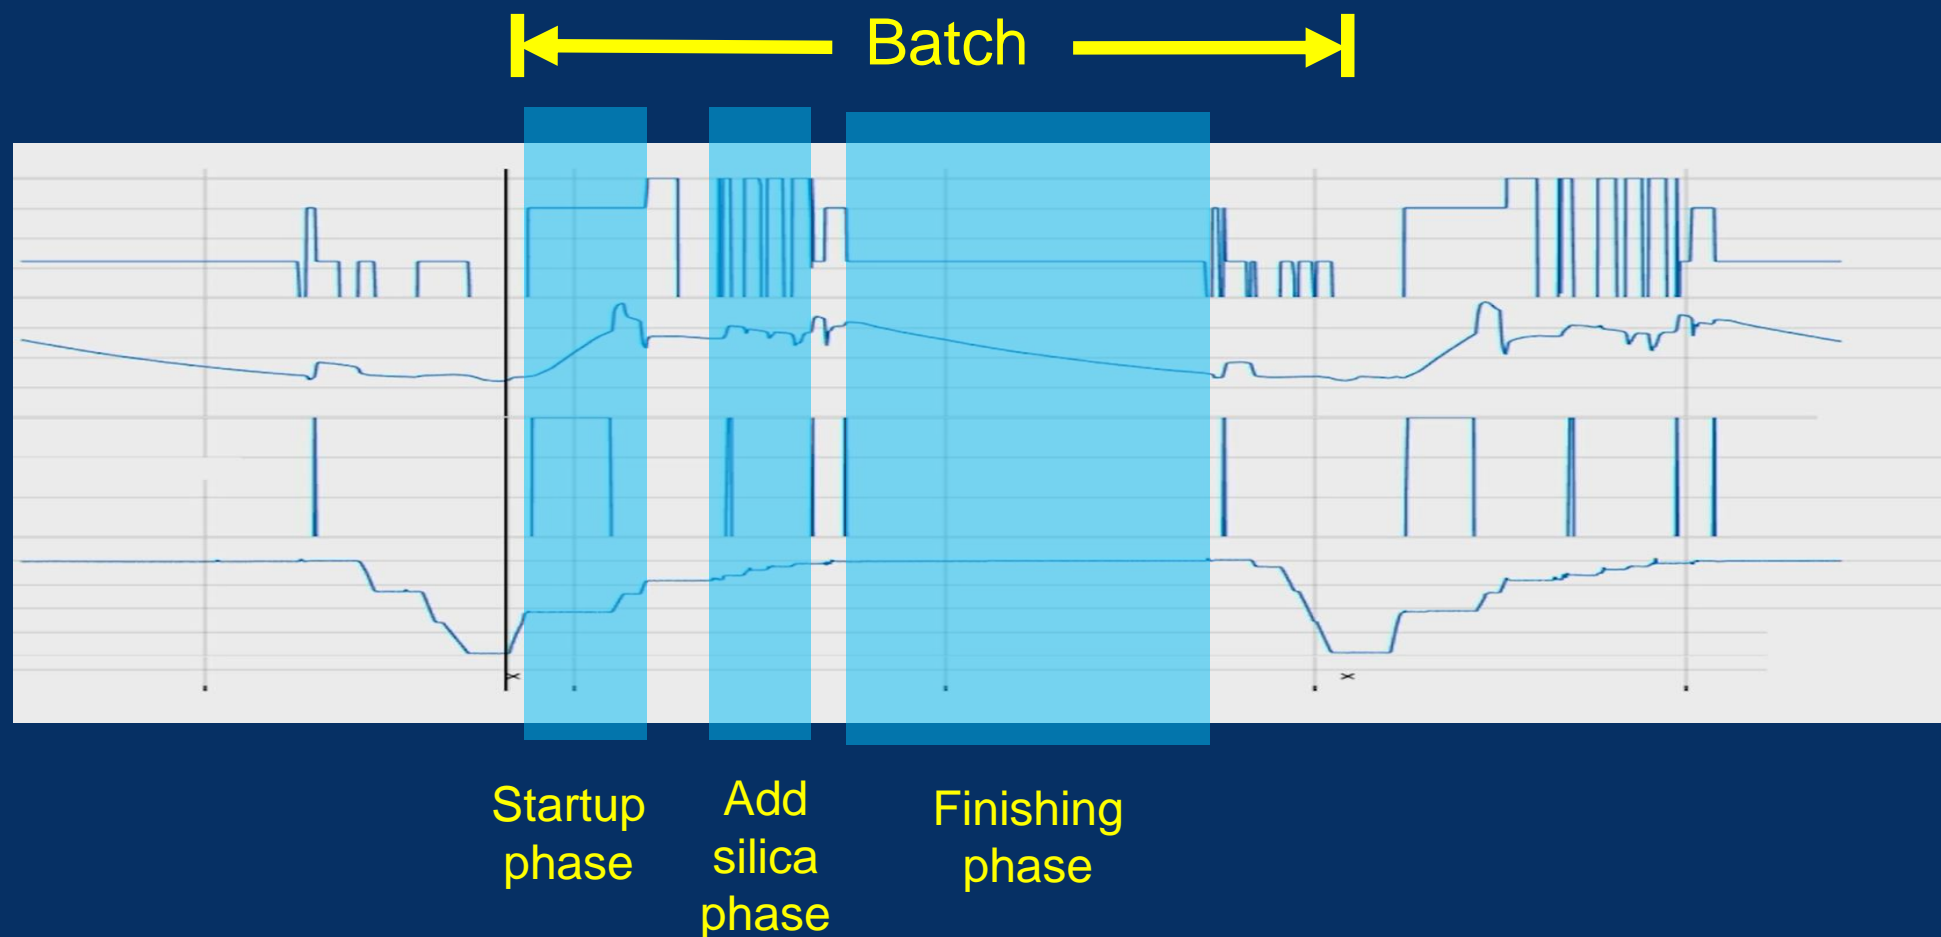

Used MATLAB to combine and clean data

Challenge #2: Need systematic pre-processing

Production
Process

Used MATLAB to sort and tag data by phase

Challenge #3: Need systematic views of data

Formulations
Archive

Sales History

Production
Process

Excel
files

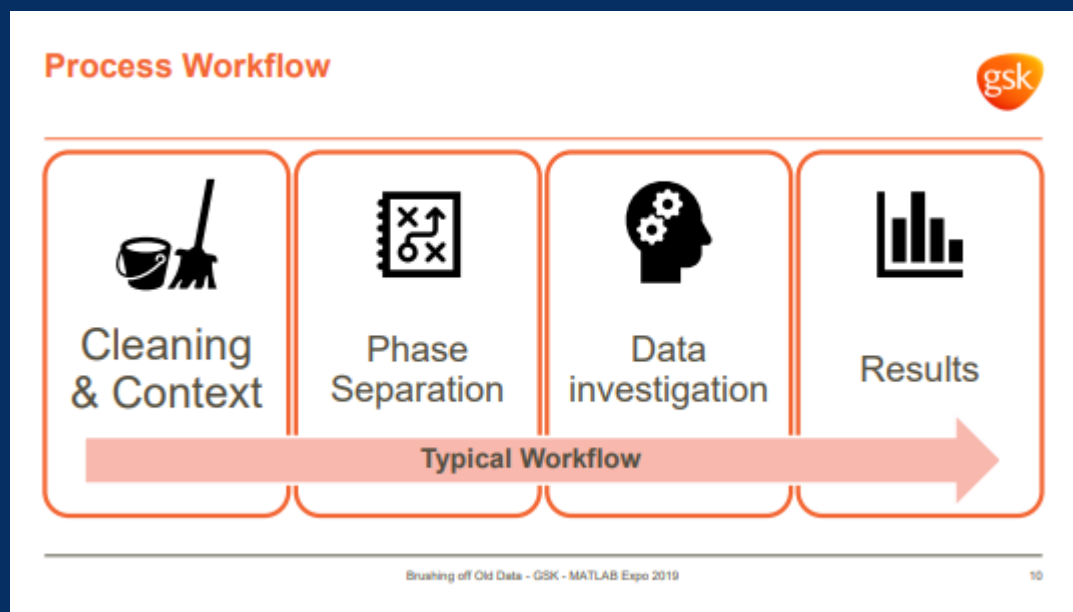

The screenshot shows a software interface with two main tabs: 'Analysis' and 'Visualisation'. The 'Analysis' tab is active and contains several sub-sections:

- Data Folders:** A list of input folders with text boxes for their names: IP21 Data (IP21Data), Operator Data (OperatorData), LIMS Data (LIMSData), Phase Definitions (PhaseDefinitions), and Output Folder (Archives).
- Mixer/Formula Combination:** A table with two columns: 'Formula' and 'Mixer Number'. The 'Formula' column lists U3004, U3008, U3440, U3442, U3444, U3530, U3531, and U3532. The 'Mixer Number' column lists Mixer 1, Mixer 3, Mixer 4, and Mixer 5. U3442 and Mixer 4 are highlighted in blue.
- Run Stages:** A section with buttons for 'Segment Batches', 'Segment Phases', and 'Add LIMS data'. It also includes checkboxes for 'Refresh data archive' (checked), 'Refresh LIMS archive', and 'Refresh Statistics'. An 'Analyse' button is also present.
- Properties:** A section with input fields for 'No. Batches' (Inf), 'Skip Batches' (0), 'Phase Cutoff' (Inf), and 'Verbosity' (2). A 'Run' button is located below this section.
- Batch Segmentation:** A section with radio buttons for 'Stage' (Premix selected, Mix unselected) and 'Start/End' (Start selected, End unselected). It also includes a dropdown for 'Seg Var' (G2_Weight), a dropdown for 'Cut Direction' (Increasing), a text box for 'Cut Value' (0.2), and input fields for 'Window min/max (hours)' (-20, 0), 'Window Midpoint' (0), 'Smooth Range' (60), and 'Buffer Size' (10). 'Load' and 'Save' buttons are at the bottom.

At the bottom of the interface, there is a status bar with a toggle for 'Safety Mode' (currently Off) and a 'Done' indicator for 'Plotting'.

Used MATLAB to build views

Results of Digital Transformation at GSK

Systematic use of data

- Combine siloed data
- Sort and tag
- Views to select

Can now use data to answer questions

- What affects the process
- How is each phase performing
- What happens if we adjust parameters

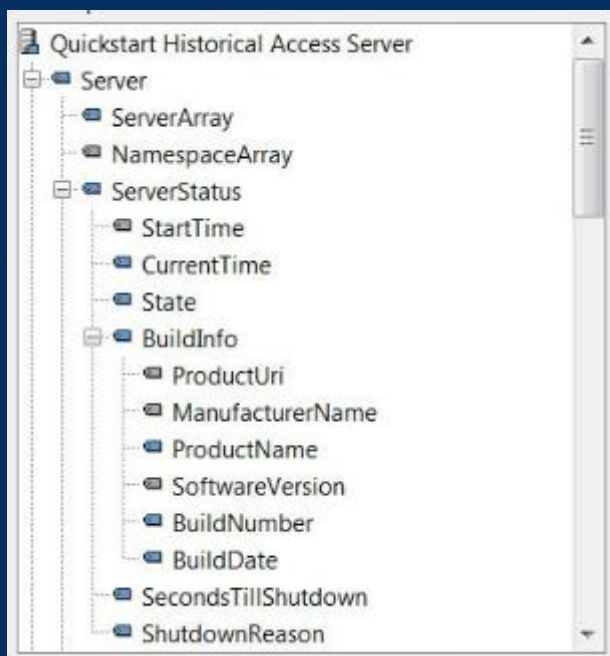

Benefits

- Reduced time to market for new formulas
- Automated reports for process improvement
- Added capacity without building a new factory

What is new to make this easier?

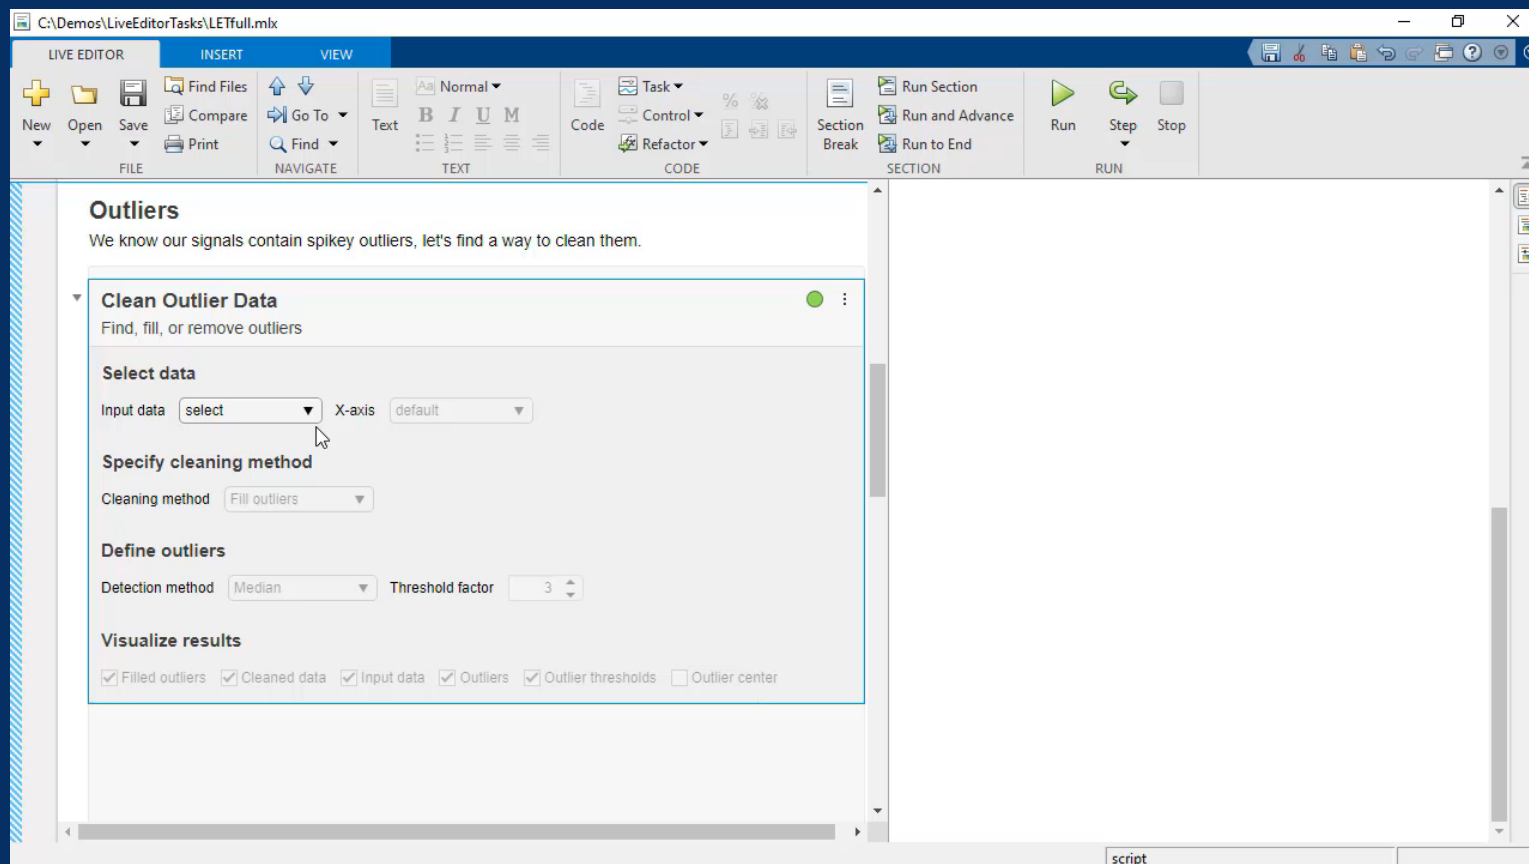

OPC UA

Access plant data securely from OPC UA-compliant servers.

Live Editor Tasks

Apps that help you reduce development time and errors

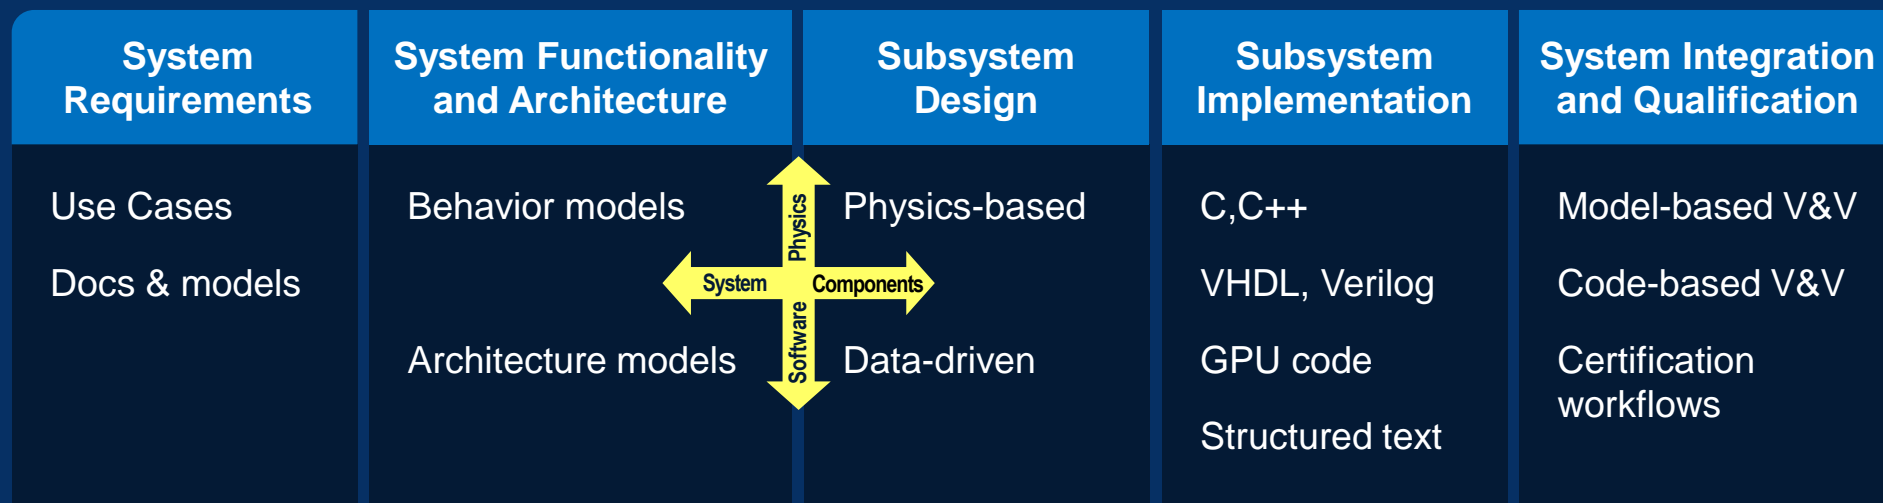

Predictive Maintenance Toolbox

Design condition indicators and estimate RUL of machinery

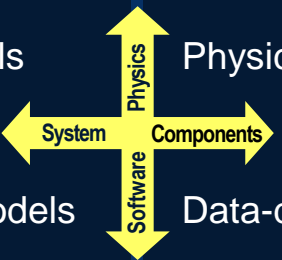

Systematic Use of Models

Model-Based Design: Systematic Use of Models in Development

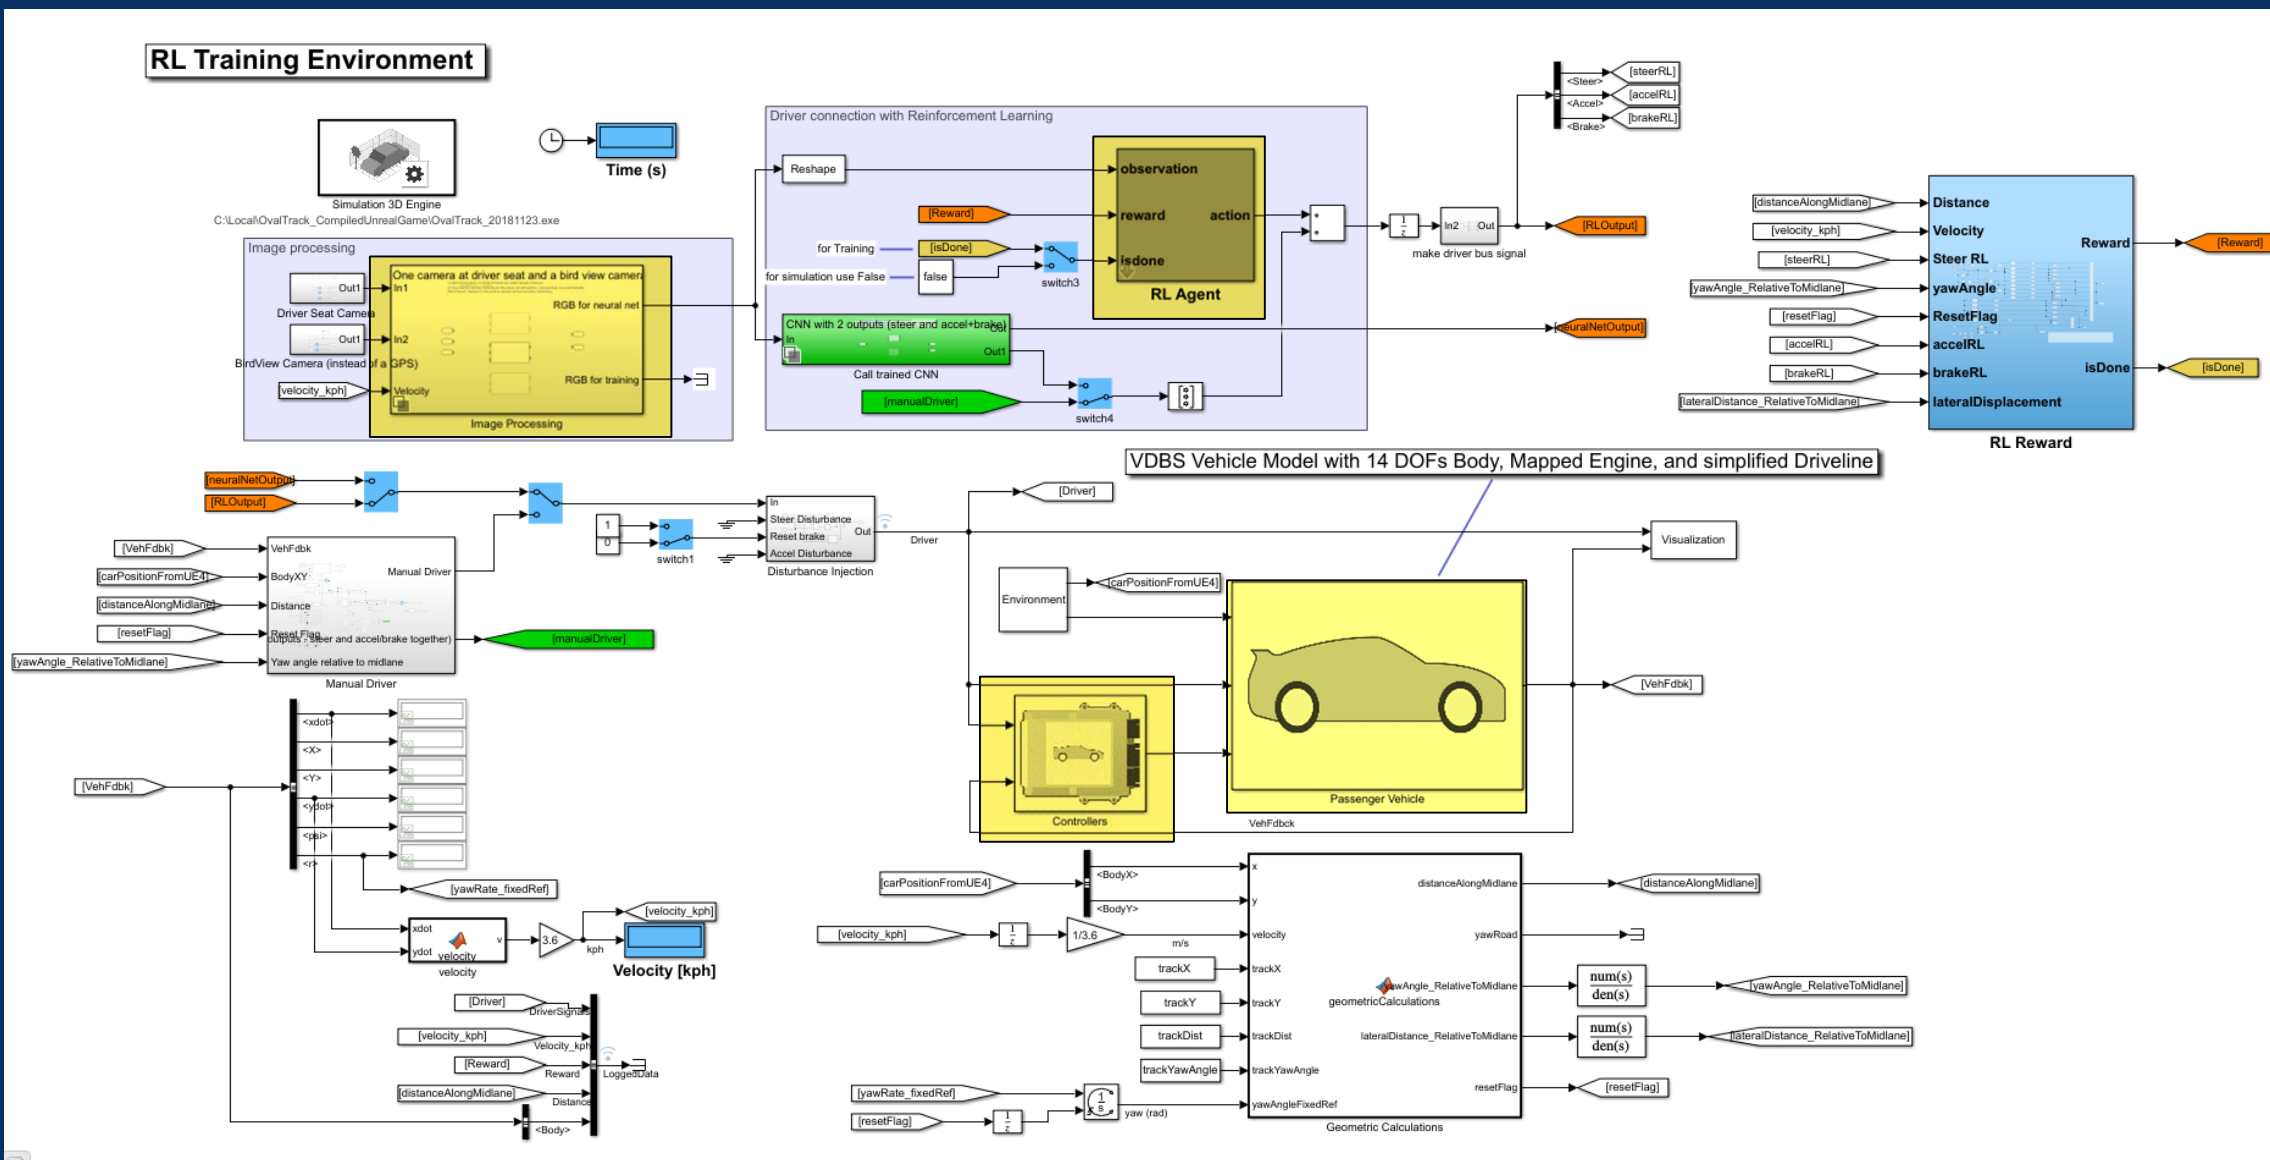

Digital Thread

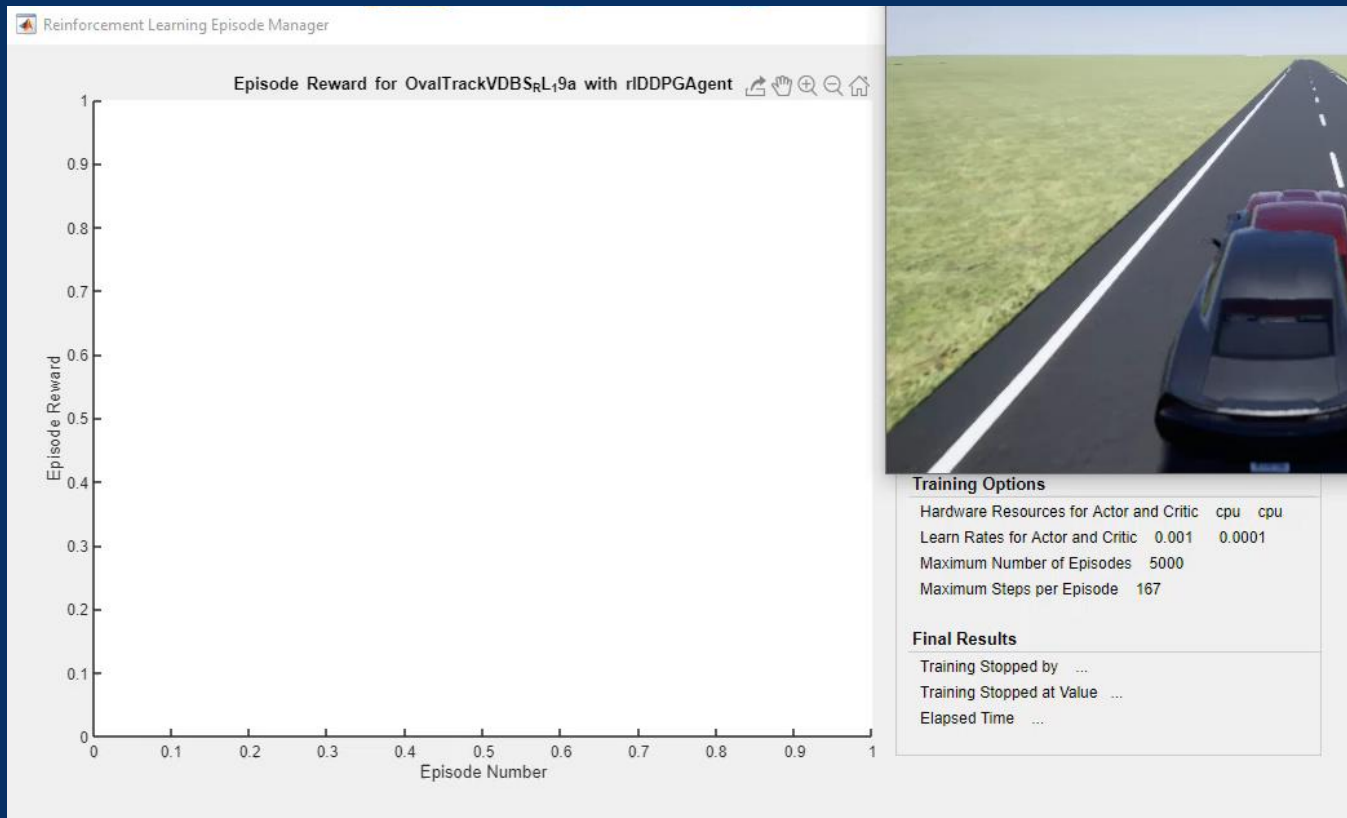

Model-Based Design: Systematic Use of Models in Development

System Requirements	System Functionality and Architecture	Subsystem Design	Subsystem Implementation	System Integration and Qualification
Use Cases Docs & models	Behavior models Architecture models <div style="text-align: center;">  </div>	Physics-based Data-driven	C,C++ VHDL, Verilog GPU code Structured text	Model-based V&V Code-based V&V Certification workflows
	AI 	Data labeling Training Quantizing	C,C++ GPU code	AI Integration in Simulink models

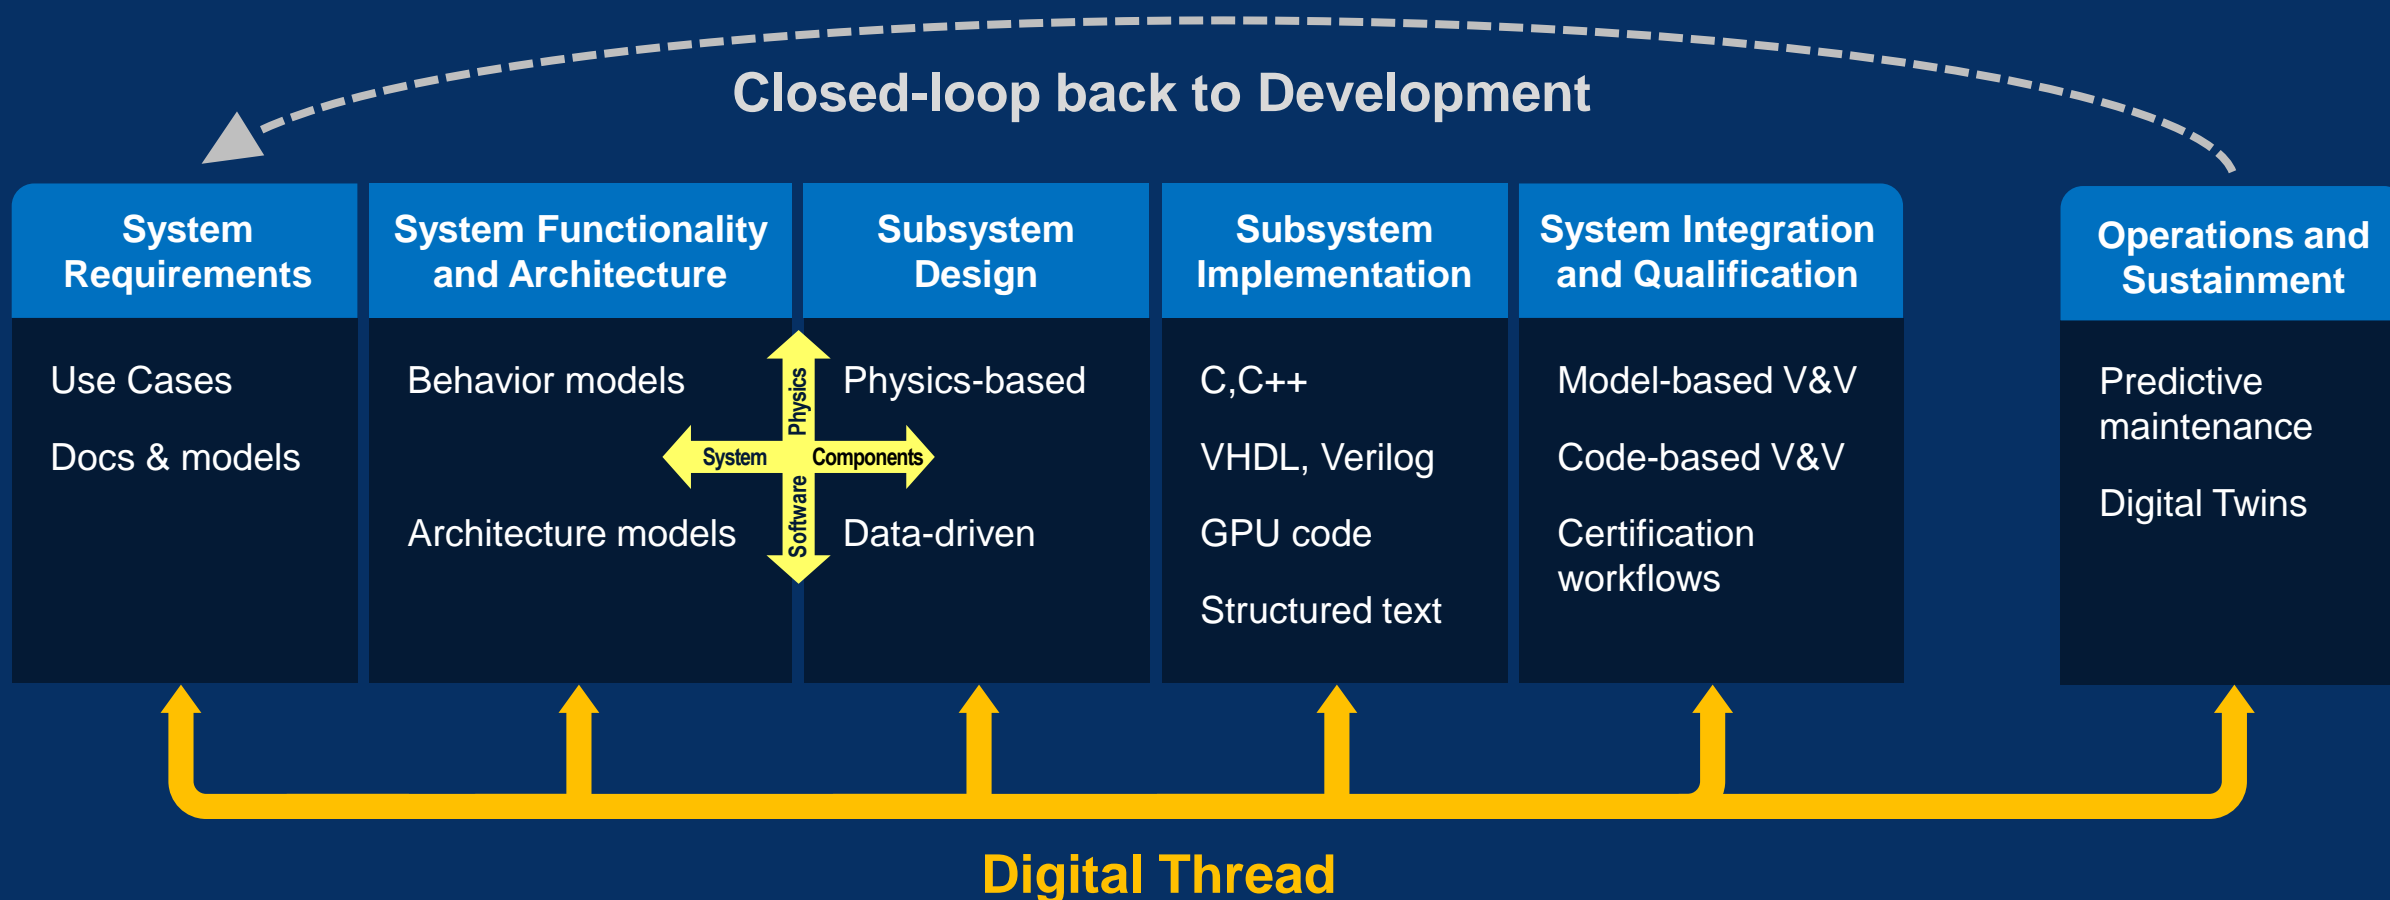

Example: Reinforcement Learning for Autonomous Vehicles

Extending Through the System's Lifecycle

Case Studies: Use of Data and Models in Operation

Atlas Copco: Digital thread for compressor systems

Schindler Elevator: Virtual commissioning

BuildingIQ: Predictive energy optimization

Tata Steel: Controller optimization

Fuji Electric: Real-time analysis of Smart Grid

Lockheed: Aircraft fleet management

Mining company: Fault detection and predictive maintenance

NIO: Battery management for electric vehicles

Atlas Copco: Challenges

Air Compressor System

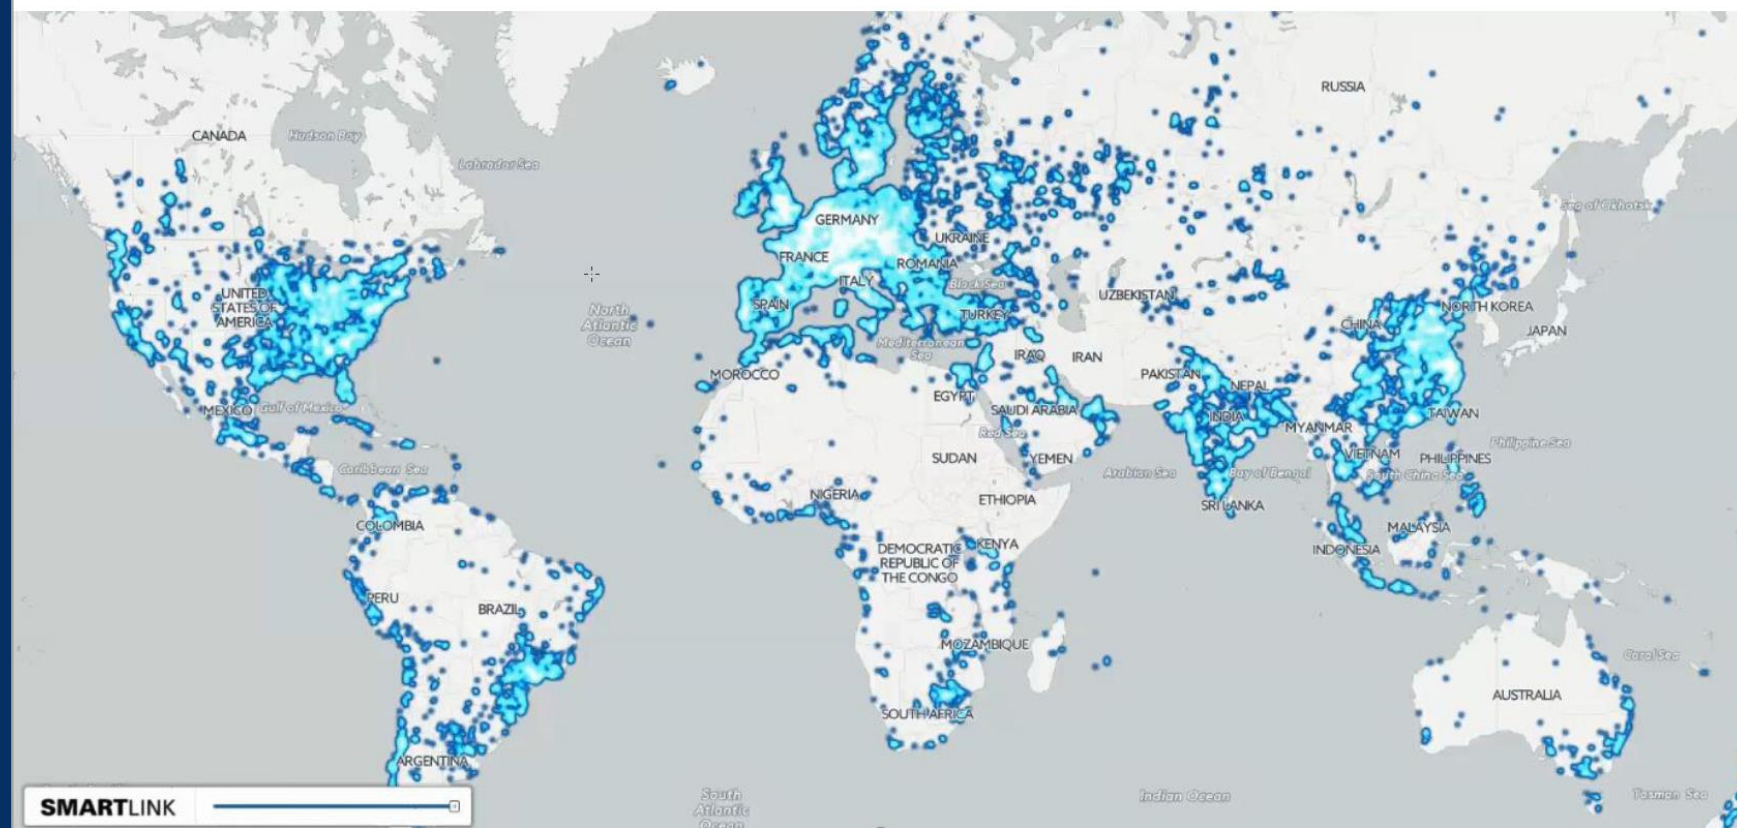

- Shorter Time to Market
- Cross divisional development
- Improve reliability and efficiency
- Control total development, production and service costs
- High product variability

Atlas Copco

System Lifecycle Use with MATLAB & Simulink

As Designed
As Configured
As Produced
As Maintained

As Maintained: > 120.000 Machines Connected

As Achieved: Standardized Model Based Engineering Platform

Process

- Company-wide workflow
- Used throughout product lifecycle
- Optimized maintenance and Data Analytics platform
- Continuously updated digital twins

People

- Collaboration platform for efficient communication
- Standardized accurate configuration tool used by global sales

Results

- 120k+ connected machines
- Quick implementation of upgrades
- Re-establishing Atlas Copco as undisputed global market leader

What is new to make this easier (more powerful/effective)?

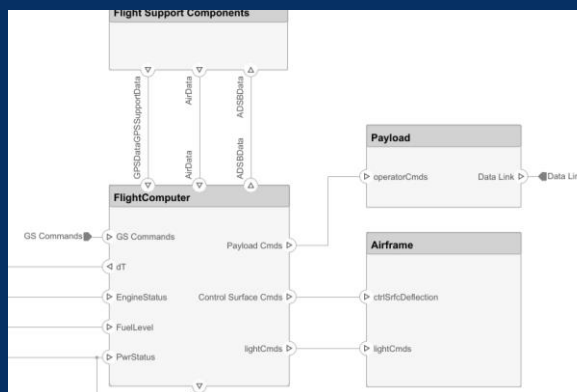

Simulink Requirements

View: Requirements Search

A **Leader** in the Gartner Magic Quadrant for 2020 Data Science and Machine Learning Platforms

We believe this recognition demonstrates our ability to:

- Empower teams, even those with limited AI experience
- Support entire AI workflows
- Deploy to embedded, edge, enterprise, and cloud
- Tackle integration challenges
- Manage risk in designing AI-driven systems

Why MathWorks for Pragmatic Digital Transformation?

Systematic use of data and models

MATLAB®
& SIMULINK®

to create and deliver superior value
to customers

throughout the entire lifecycle

Keep in mind today:

How can **you** systematically use models and data as part of **your** pragmatic digital transformation?

Enjoy the Conference!
